

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

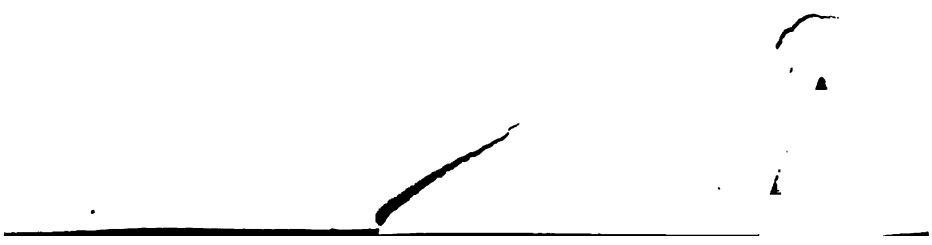

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

REPORT.

TO THE RIGHT HON.

LORD BALFOUR OF BURLEIGH,

Her Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, 1*st August* 1900.

MY LORD,

I had the honour in 1899, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to you, as Her Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1898, along with the usual Explanation and Commentary.

At the same time my Thirty-fourth Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1898).

I have the honour to be,

MY LORD,

Your most obedient Servant.

STAIR AGNEW,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR-CUNYNGHAME, M.D., F.R.S.E.

SIR,

The estimates of population as presented in the Report are, as usual, founded upon the enumeration of males and females, as made at the two censuses of 1881 and 1891, the rate of increase of each sex being assumed to have continued constant since 1891. The population of Scotland accordingly, as estimated to the 30th June 1898, is 4,249,946, of which 2,053,648 are of the male sex and 2,196,298 of the female.

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1898, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.	
1855	2,978,065	93,349	7,357	62,004	19,680	31,345	3·1491	2·0820	0·6608	7·8

Principal Towns above 25,000 inhabitants. Large Towns above 10,000 and under 25,000 inhabitants.
The Small T ...000 to 10,000 inhabitants from 1855 to 1881, but from 1881 and upwards the
Small Tow ...00 to 10,000 of population.

estimated number of inhabitants is 1,750,580, the males 836,081, the females 914,499; in the Large Town Districts the gross population is 567,771, the males 277,231, the females 290,540; in the Small Town Districts the total number of inhabitants is 895,751—males 434,251, females 461,500; the Mainland Rural Districts have a total population of 914,112—males 449,531, females 464,581; the Insular Rural Districts having a population of 121,732, males numbering 56,554, females 65,178.

BIRTHS.

The number of births registered throughout Scotland during the year 1898 was 130,861, giving a birth-rate of 3·08 per cent., or 308 births in every ten thousand of the population. This is the largest number of births which has been reported since the commencement of registration in the year 1855. The mean birth-rate for the last ten years is at the rate of 3·08 per cent. of the population.

The male births during the year are 66,814, and the female 64,047. The births are in excess of the deaths by 52,464. The number of illegitimate births in all Scotland was 8870, and constituted 6·78 per cent. of the total registered births—the lowest rate that has been noted in these reports. The male illegitimates are 4575 in number, and the female 4295.

Tables VIII. and IX. show how the births are distributed throughout the five primary Registration Districts:—In the Principal Town Districts they total to 56,520,—of those 28,751 are of the male sex and 27,769 of the female, together giving a birth-rate of 3·23 per cent.; in the Large Town Districts they are 18,454,—males 9456, females 8998, constituting a birth-rate of 3·25 per cent.; in the Small Town Districts they are 28,109,—males 14,384, females 13,725, a rate of 3·14 per cent. of population; in the Mainland Rural Districts they are 25,075,—males 12,830, females 12,245, a rate of 2·74 per cent.; and in the Insular Rural Districts they number 2,703,—males 1393, females 1310, together giving a birth-rate of 2·22 per cent. to the population of the same.

In the same Tables reference is made to the illegitimate births, which this year are fewer than have as yet been recorded. In the Principal Town Districts they number 3644, equal to 6·45 per cent. of the total births in the same,—males 1847, females 1797; in the Large Town Districts they are 954, or 5·17 per cent. of all,—males 514, females 440; in the Small Town Districts they are 1870, or 6·65 per cent. of the whole,—males 964, females 906; in the Mainland Rural Districts they number 2258, or 9·00 per cent.,—males 1182, females 1076; and in the Insular Rural Districts they are 144, or 5·33 per cent.,—males 68, females 76; or, in other words, 1 child in every 15 was born out of wedlock in the Principal Town Districts; 1 in every 19 in the Large Town Districts; 1 in every 15 in the Small Town Districts; 1 in every 11 in the Mainland Rural Districts; and 1 in every 18 in the Insular Rural Districts; the rate for all Scotland being 1 in every 15.

In the Principal Towns, as seen from Table V., the highest ratio of illegitimate births occurred in Dundee, where 9·09 per cent. of the total

---

TABLE V.—Number of Births, Deaths, and Marriages in the Principal Towns of Scotland during 1898, and their Proportion to the Estimated Population; also the Illegitimate Births, and their Proportion to the Total Births.

33 Wigtown	34,022	903	2·6542	137	15·17	606	1·7812	192	0·5643

In Table VI. the rate of illegitimacy in the counties is referred to, this varying from 15·17 per cent., the highest, in Wigtown, to 3·55 per cent., the lowest, in Dumbarton. Those counties in which the highest rate occurs are—Aberdeen with 11.81 per cent.; Elgin with 12·10 per cent.; Caithness with 13·03 per cent.; Banff with 13·49 per cent.; and Wigtown with 15·17 per cent. The lowest rates fall in Renfrew with 4·72 per cent.; Shetland with 4·60 per cent.; Bute with 4·55 per cent.; and Dumbarton with 3·55 per cent.

66,814 of the births during the year were of the male sex, and 64,047 of the female, so that 2767 more of the former were born than of the latter. The proportion of males born to females is as 104·3 is to 100. Among the legitimate births alone the ratio is as 104·2 is to 100, and among the illegitimate as 106·5 is to 100.

TABLE VII.—Births in Scotland, 1855–1898; with the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; also the Number of Twin and Triplet Births during each year; and the Proportion of Mothers who had Multiple Births.

During the year 1450 of the births were of twins and 14 of triplets, so that of the total mothers bearing children—in all, 129,383—one in every 89 bore two at a birth, and one in every 9242 bore three.

The births were registered throughout Scotland in each month in the following proportions:—8·92 per cent. during May, 8·72 per cent. during April, 8·68 per cent. during March, 8·67 per cent. during June, 8·61 per cent. during August, 8·57 per cent. during October, 8·43 per cent. during July, 8·23 per cent. during January, 8·10 per cent. during December, 8·03 per cent. during September, 7·77 per cent. during November, and 7·27 per cent. during February.

The birth-rate for each ten thousand of the population as estimated in the following European States is, for the present year, 377 in Hungary, 368 in Prussia, 362 in Austria and in the German Empire, 338 in Italy, 319 in the Netherlands, 305 in Denmark, 303 in Norway, 294 in Switzerland, 286 in Belgium, and 221 in France.

MARRIAGES.

32,112 marriages were registered in Scotland during 1898, giving a marriage rate of 75·56 in every ten thousand of the population. The mean average rate for the last ten years (1888-1897) is 69 per ten thousand.

TABLE VIII.—Births, 1898. Number of Legitimate, Illegitimate, and Total Births in Scotland, and its Five Groups of Districts, distinguishing the Sexes. Also the number of Twin and Triplet Births.

Table VI. indicates how the marriage rate varies in the different districts, &c., into which Scotland is divided; thus, in the Principal Town Districts the rate per ten thousand of the inhabitants of the same is 92·76; in the Large Town Districts it is 74·96; in the Small Town Districts it is 69·79; in the Mainland Rural Districts it is 54·23; and in the Insular Rural Districts it is 33·60—ratios which, when compared with the corresponding of last year, show an increase in each district except in the Insular Rural District, where the reverse holds. In the counties also the rate varies greatly, the highest—89·05 per ten thousand of the inhabitants—occurring in Edinburgh, the lowest—30·73—in Sutherland. The rate in four counties exceeds that for Scotland, viz.:—in Aberdeen, where it is 78·66; in Renfrew, 80·18; in Lanark, 88·83; and in Edinburgh, 89·05. The counties in which the marriage rate is lowest are—Ross and Cromarty, with one of 45·96; Orkney, 45·80; Bute, 45·47; Argyll, 41·26; Shetland, 40·46; and Sutherland, 30·73 per ten thousand. Table V. gives the corresponding rates in each of the Principal Towns, that in Glasgow being 98·0; in Edinburgh, 98·7; in Dundee, 78·1; in Aberdeen, 97·4; in Govan and Partick, 73·0; in Leith, 81·5; in Paisley, 92·3; in Greenock, 86·5; in Coatbridge, 80·9; in Perth, 99·9; and in Kilmarnock, 92·8.

The fertility of each marriage is calculated in the usual manner—the legitimate births registered during the year under review being divided by the marriages of a former year—on this occasion 1892; so that $\frac{121,999}{28,670}$ gives 4·26 as the average fertility of each marriage, or 426 children were born to every 100 marriages.

Tables X., XI., and XII. afford some information regarding the number and proportion of marriages as performed in Scotland and in each of its five great Registration Districts under various religious denominations. Thus, of the whole 32,112 marriages, the ceremony in 14,567 was performed by clergy of the Established Church, in 6033 by those of the Free Church, in 3486 by those of the United Presbyterian Church, in 3091 by those of the Roman Catholic Church, in 949 by those of the Episcopal Church, in 2418 by those of other denominations, while 1568 of the marriages were irregular, being performed without proclamation of purpose and without reference to the intervention of religious ceremony. In other words, 45·36 per cent. of the total marriages are in accordance with the usages of the Established Church, 18·79 per cent. with those of

denominations, in 0·20 per cent. the denomination is not stated, and 1·85 per cent. of the marriages were irregular.

Table X*a.* gives for each County and Principal Town in Scotland the number of marriages contracted and their proportions according to the forms of the various denominations. In twenty of the former 50·00 per cent. or over of the marriage ceremonies were performed by clergy of the Established Church, the highest rates being 67·39 per cent. in Kinross, 70·75 per cent. in Kirkcudbright, 73·45 per cent. in Shetland, and 77·30 per cent. in Kincardine; the lowest were 35·20 per cent. in Lanark, 25·00 per cent. in Sutherland, and 13·41 per cent. in Ross and Cromarty. Free Church marriages are seen to occur at a rate of over 50·00 per cent. in Caithness, where they form 54·59 per cent. of the whole, in Sutherland 73·44 per cent., and in Ross and Cromarty 80·17 per cent., being lowest in

be noted in Aberdeen, 3·69 per cent., in Kincardine 3·78 per cent., in Edinburgh 5·66 per cent., and in Forfar 6·58 per cent.; least so in Ross and Cromarty, 0·84 per cent., in Elgin 0·66 per cent., and in Wigtown 0·52 per cent., there being none in Shetland, Orkney, Caithness, Sutherland, Nairn, Kinross, Bute, and Peebles. Ceremonies as performed by clergymen of other denominations than the above are most marked in Renfrew, 9·61 per cent., in Lanark 10·57 per cent., and in Selkirk 11·81 per cent.; least so in Haddington, 0·85 per cent., there being none in Kinross. Irregular marriages bulk most largely in Lanark, where 8·90 per cent. of the whole come under this heading, and in Edinburgh 9·03 per cent., being in lowest proportion in Linlithgow with 0·47 per cent., Dumbarton with 0·44 per cent., Haddington with 0·43 per cent., and Roxburgh with 0·34 per cent.; there are none in Shetland, Sutherland, Ross and Cromarty, Nairn, Kincardine, Kinross, Clackmannan, Argyll, Berwick, Peebles, Selkirk, Kirkcudbright, and Wigtown.

In the case of the Towns—in Aberdeen and in Leith over 50·00 per cent. of the marriages during the year were performed by ministers of the Established Church, the lowest rates occurring in Dundee, 35·02 per cent., in Govan and Partick 32·87 per cent., in Paisley 32·71 per cent., and in Coatbridge 22·58 per cent. Marriages by clergymen of the Free Church are in largest ratio in Perth, 19·61 per cent., in Kilmarnock 19·79 per cent., in Aberdeen 20·32 per cent., and in Paisley 22·81 per cent.; least so in Glasgow, 14·88 per cent., and in Leith 13·51 per cent. The United Presbyterian Church is best represented in Leith with 14·31 per cent., in Paisley with 14·78 per cent., and in Coatbridge with 15·06 per cent.; least so in Dundee with 9·57 per cent., in Greenock with 5·10 per cent., and in Aberdeen with 4·75 per cent. Marriages as performed by clergy of the

Roman Catholic Church are most marked in Govan and Partick with 17·78 per cent., in Greenock with 20·98 per cent., and in Coatbridge with 34·05 per cent.; least so in Leith with 6·75 per cent., in Perth with 6·54 per cent.; in Edinburgh with 5·66 per cent., and in Aberdeen with 1·83 per cent. Episcopal Church marriages are most in evidence in Edinburgh with 6·96 per cent., and in Dundee with 8·95 per cent.; least so in Kilmarnock with 2·83 per cent., and Glasgow with 2·13 per cent. Unions as accomplished by clergy of other denominations than the above are in largest ratio in Glasgow with 11·10 per cent., in Aberdeen with 11·48 per cent., and in Govan and Partick with 11·69 per cent.; in the smallest in Edinburgh, where 4·59 per cent. of the whole come under this heading. Irregular marriages found most favour in Govan and Partick with 6·43 per cent., in Edinburgh with 12·17 per cent., and in Glasgow with 12·44 per cent., the reverse occurring in Kilmarnock with 2·12 per cent., Greenock with 2·08 per cent., Coatbridge with 1·43 per cent., and Paisley with 0·86 per cent.

Tables XIII. and XIV. afford some information as to the ages at which marriage was effected in Scotland, as of the total 32,112 ceremonies the age of each of the contracting parties was given in all except in the case of four of the husbands and of three of the wives. Of the male spouses, 1917, or 5·97 per cent., and of the female 5916, or 18·42 per cent., were under 21 years of age at marriage, 26 of the former being under 18 years, while 6 of the latter were between 15 and 16 years, and 51 were between 16 and 17 years. On the other hand, 31 of the husbands were over 70 years of age, none of the brides having attained a greater age than 70. Table XIV. gives the proportions of marriages at various ages in Scotland and in each of its Primary Registration Districts: thus in Scotland 2·45 per cent. of the husbands and 10·68 per cent. of the wives were under 20 years of age at marriage, ratios exceeded in the case of both in the Principal Town Districts and of the wives in the Large Town Districts. Between 20-25 years, 34·40

At ages over 50 years, 2·48 per cent. of the husbands and 0·82 per cent. of the wives married throughout Scotland, proportions exceeded in the case of both sexes in the Principal Town Districts, and of the men in the Insular-Rural Districts.

During the year 28,371 bachelors espoused spinsters, 761 bachelors united with widows, 2153 widowers married spinsters, and 819 widowers did likewise with widows; or 88·35 in every hundred of the marriages were between bachelors and spinsters, 2·37 between bachelors and widows, 6·70 between widowers and spinsters, and 2·55 between widowers and widows.

From Table XVIII. an indication may be obtained as to the amount of elementary education possessed by those who married during the year, inasmuch as the proportions of husbands and wives who signed their marriage register, or who in lieu thereof made use of *mark*, is given for Scotland and the different districts, divisions, and counties, which, when compared with similar Tables for former years, shows a steady and decided improvement. During the year under review, 98·18 per cent. of the men who married and 96·99 per cent. of the women who married wrote their names on the register, leaving 1·82 per cent. of the former and 3·01 per cent. of the latter who made use of their *mark* instead. Those ratios vary in the different groups of districts, there being in the Principal Town Districts 1·97 per cent. of the husbands who used *mark*, 3·29 per cent. of the wives doing likewise; in the Large Town Districts the corresponding proportions are 2·02 per cent. and 2·80 per cent.; in the Small Town Districts they are 1·62 per cent. and 2·62 per cent.; in the Mainland-Rural Districts they are 1·05 per cent. and 1·21 per cent.; and in the Insular-Rural Districts 6·60 per cent. of the bridegrooms and 21·76 per cent. of the brides were apparently unable to write their names.

In ten of the counties the husbands made use of *mark* in greater proportion than was the case for all Scotland, the wives in eight counties doing the same. The counties in which the former fail are Sutherland, Ross and Cromarty, Inverness, Stirling, Dumbarton, Argyll, Bute, Renfrew, Lanark, and Peebles; those in which the latter fail are Shetland, Sutherland, Ross and Cromarty, Inverness, Dumbarton, Argyll, Renfrew, and Lanark. In Kinross, Selkirk, and Kirkcudbright the whole of both brides and bridegrooms signed their names, the former in Orkney and Nairn and the latter in Clackmannan doing the same. In the two lower lines of the Table the cities of Edinburgh and Glasgow are compared in the same way. In the former, 99·42 per cent. of the men and 99·28 per cent. of the women wrote, leaving 0·58 per cent. of the first and 0·72 per cent. of the second to use *mark*; and in Glasgow the corresponding rates are 97·14 per cent. and 2·86 per cent. for the men, and 95·07 per cent. and 4·93 per cent. for the women.

15·20 per cent. of the marriages were registered during the month of June, 13·67 per cent. during December, 12·60 per cent. during January, 11·78 per cent. during July, 6·90 per cent. during April, 6·85 per cent. during October, 6·70 per cent. during November, 6·61 per cent. during August, 6·24 per cent. during September, 5·13 per cent. during March, 4·99 per cent. during February, and 3·33 per cent. during May.

The marriage rate per ten thousand of estimated population in the undernoted European States during 1898 is as follows:—70 in Norway and in Italy, 73 in the Netherlands, 75 in France, 76 in Denmark, 79 in Austria, 80 in Switzerland, 83 in Hungary and in Belgium, and 85 in the German Empire and in Prussia.

DEATHS.

During the year 1898 there were 78,397 deaths registered throughout Scotland, which gives a mortality rate of 184 in every ten thousand of the population as estimated, or one death in every 54 of the inhabitants. Of these, 39,344 are of the male sex, and 39,053 of the female. On comparing the number of deaths during the present year with that of the preceding year the former are found to be fewer by 747. The mortality rate among the males alone is 192 in every ten thousand, and among the females 178. The mean death-rate for the last ten years is 188 per ten thousand of the population.

Tables XIX. and XX., and also Table VI., give the number of deaths and the mortality rate in each of the five great Registration Districts. The former Table shows the number of deaths registered in the Principal Town Districts to be 35,367, the rate as shown in the latter being 202 in every ten thousand of the inhabitants of the same; the male deaths number 17,941, and the female

TABLE XIX.—Deaths of Males and Females in Scotland, and its Five Groups of Districts, during each of the Years 1855–1898.

17,426. In the Large Town Districts the deaths total to 10,729, equivalent to 189 in every ten thousand of the inhabitants, the males being 5385, and the females 5344. In the Small Town Districts the deaths are 15,611, and the rate 174 per ten thousand of population, males numbering 7681, and females 7930. In the Mainland-Rural Districts the deaths amount to 14,859, at a rate of 163 per ten thousand of the inhabitants of the same, the male deaths being 7448, and the female 7411; and in the Insular-Rural Districts the deaths number 1831 in all, giving a rate of 150 in every ten thousand of the population, the male deaths being 889, and the female 942. On comparing the total Urban with the total Rural rate the former is found to be 192 and the latter 161 in every ten thousand of the respective populations. Tables XXI. and XXII. show the number of deaths and their percentage to the population in each of the Principal Towns of Scotland. In Glasgow 15,328 deaths were registered during the year, being at the rate of 21·2 per thousand of its inhabitants; in Edinburgh the deaths are 5798, the rate 19·6 per thousand of its popu-

lation; in Dundee the deaths are 3455, the rate being 21·0; in Aberdeen the deaths are 2683, the rate 19·1; in Govan and Partick they total to 1957, the rate being 16·7; in Leith they amount to 1364, and the rate 17·9; in Paisley they are 1584 in number, and in rate 21·0; in Greenock they are 1308 and 21·4 respectively; in Coatbridge they are 700, the rate being 20·3; in Perth they are 628 and 20·5; and in Kilmarnock the registered deaths are 562, the mortality rate being 18·4 per thousand of the inhabitants.

Tables XXIII. and XXIV. give the number of deaths of both sexes in Scotland, and in each of the Primary Registration Districts at a series o ages, with the proportion of them to the numbers presumably alive at the same ages. Thus, of children under one year of age 16·842 per cent. of the males and 14·017 per cent. of the females died throughout Scotland during the year, a rate exceeded, and that in the case of both sexes, in the Principal and Large Town Districts, the lowest rates being 8·689 per cent. and 7·654 per cent. for the respective sexes in the Insular-Rural Districts. In each district the male rate is higher than that of the female.

Under two years of age the death-rate for the males in Scotland is 6·154 per cent., and for the females 5·632 per cent., ratios exceeded, and for both sexes, in the Principal and Large Town Districts, the lowest rates being

2·067 per cent. and 2·159 per cent. in the Insular-Rural Districts. In each district, except the Insular-Rural, the male rate is above that for the female.

Under three years of age the death-rate among the males in Scotland is 2·128 per cent., and among the females 2·138 per cent., exceeded, and for both sexes, in the Principal and Large Town Districts, the lowest rates—0·936 and 0·777 per cents.—falling in the Insular-Rural Districts. In the Small Town Districts the female death-rate at this age is above the male.

Under four years of age the rate for the males is 1·139 per cent., and for the females 1·194 per cent., exceeded in the case of both in the Principal and Large Town Districts, the lowest rates occurring in the Mainland-Rural Districts, of 0·720 per cent. and 0·657 per cent. In the Principal Town Districts, Large Town Districts, Small Town Districts, and Insular-Rural Districts the female death-rate is higher than the male.

Under five years of age the rate for the respective sexes in Scotland is 0·848 per cent. and 0·989 per cent., exceeded in the Principal and Large Town Districts in both cases. In every district, with the exception of the Large Town Districts, the female rate is higher than the male.

At all ages under five years the male mortality rate is 5·609 per cent. and the female 4·930 per cent. of the children presumably alive throughout Scotland of the same age. Between five and ten years the rates have fallen to 0·421 per cent. and 0·491 per cent. for the respective sexes. And they have reached their minimum during the next quinquennial period of 0·286 per cent. for the boys and 0·318 per cent. for the girls throughout Scotland, rates somewhat exceeded in the case of both in the Principal Town Districts, and of the females in the Large Town and Insular-Rural Districts. In each district the female mortality rate at this age is above that of the male. Between 15-20 years the rate for Scotland in the case of the males is 0·503 per cent., and of the females 0·488 per cent., ratios exceeded in the case of both sexes in the Small Town Districts, of the males in the Principal Town and Insular-Rural Districts, and of the females in the Mainland-Rural

Districts. In the Mainland-Rural Districts alone is the female death-rate greater than the male. Between 20-30 years the male rate for the whole country is 0·745 per cent., and the female 0·649 per cent., proportions exceeded as to both sexes in the Principal Town and Insular-Rural Districts, and by the females in the Large Town Districts. From 30 years upward the rate increases more rapidly, and that in each district and for both sexes. The male death-rate for Scotland at all ages is 192 for the male sex and 178 for the female per ten thousand of their respective numbers. In the

the population estimated to be alive at these same ages. Thus, the highest mortality rate under 1 year occurred in Dundee where 20·93 per cent. of the infants presumably alive at this early age succumbed during the year, followed by Coatbridge with 19·90 per cent., Aberdeen with 19·65 per cent., Glasgow with 18·29 per cent., Govan and Partick with 17·49 per cent., Greenock with 17·32 per cent., Edinburgh with 17·08 per cent., Paisley with 16·74 per cent., Leith with 16·67 per cent., Perth with 16·54 per cent., and Kilmarnock with 14·59 per cent. During the second year of life the greatest mortality rate was in Dundee, 8·92 per cent., followed by Glasgow with one of 8·72 per cent., Paisley with one of 7·92 per cent., Govan and Partick with one of 7·80 per cent., Coatbridge with one of 7·47 per cent., Greenock with one of 6·64 per cent., Edinburgh with one of 6·55 per cent., Aberdeen with one of 6·53 per cent., Kilmarnock with one of 6·11 per cent., Leith with one of 5·97 per cent., and Perth with one of 4·20 per cent. At all ages under 5 years the death-rate to the population at the same age was 7·53 per cent. in Dundee, 7·17 per cent. in Coatbridge, 7·11 per cent. in Glasgow, 6·40 per cent. in Greenock, 6·31 per cent. in Govan and Partick, 6·27 per cent. in Aberdeen, 6·20 per cent. in Paisley, 5·90 per cent. in Edinburgh, 5·56 per cent. in Leith, 5·09 per cent. in Kilmarnock, and 4·87 per cent. in Perth.

Table XXV. shows the percentage of deaths at various ages to the total deaths in Scotland and in each of the five great districts. In Scotland the mortality among male infants under one year of age formed 24·76 per cent. of the total deaths at all ages, among females it was 20·03 per cent., exceeded as to both sexes in the Principal and Large Town Districts, and by the males in the Small Town Districts. At all ages under 5 years the male rate throughout the country is 38·39 per cent., the female 32·96 per cent., that in the towns generally being much above the same in the country districts.

The death-rate per ten thousand of the estimated population of the undernoted European States during the year is as follows:—279 in Hungary, 249 in Austria, 231 in Italy, 212 in France, 206 in the German Empire, 201 in Prussia, 189 in Switzerland, 176 in Belgium, 170 in the Netherlands, 156 in Denmark, and 152 in Norway.

CAUSES OF DEATH.

Of the 78,397 deaths registered throughout Scotland during the year, 616 were so ill defined, or specified in such a manner as to be no use for statistical purposes.

The mortality rate for Scotland, both sexes combined, is for the year, 1845 in every hundred thousand of the population as estimated,—the male rate 1916 and the female 1778,—being in each case considerably under the same for last year.

The number of deaths registered throughout Scotland from Zymotic diseases during 1898 is 11,736, which is in the ratio of 278 for every hundred thousand of the population and equal to 15·09 per cent. of the total mortality. The incidence of such diseases was much more marked in the Urban than in Rural Districts, the highest rate occurring in the Principal Town Districts, the lowest in the Insular-Rural Districts. In the Large Town Districts, Small Town Districts, and Mainland-Rural Districts the rate for the present year is above that for last—1897. (Tables XXVIII. and XXIX.)

Table XXXII. is so arranged as to show the number and proportion of deaths from Zymotics at a series of ages, five in number. The total number of deaths from such diseases is 11,736, a larger number than during any year since 1893. Of those, 7781 occurred during the first five years of life, 705 between the ages of five and ten years, 202 between ten and fifteen years, 1890 between fifteen and sixty years, and 1158 at greater ages than this—the proportions corresponding to these being 66·3 per cent. during the earliest years of life, 6·0 per cent. during the second five years, 1·7 per cent.

between 10-15 years, and 30 or 1·4 per cent. at greater ages, one being over 60. Scarlet Fever caused 909 deaths, 544 or 59·9 per cent. of them between birth and the fifth birthday, 224 or 24·6 per cent. during the second quinquennial period of life, 52 or 5·7 per cent. between 10-15 years, 88 or 9·7 per cent. between 15 and 60 years, and one at a greater age. Hooping Cough accounts for 2476 registrations, 2370 or 95·7 per cent. of them during the first period of life—0-5 years, 99 or 4·0 per cent. between 5-10 years, and 7 or 0·3 per cent. between 10-15 years. Influenza is the cause of 1291 deaths, 115 or 8·9 per cent. of them during the first five years of life, 14 or 1·1 per cent. between 5-10, as also between 10-15 years, 437 or 33·8 per cent. between 15-60 years, and 711 or 55·1 per cent. at ages above 60. Diphtheria caused 661 exits, 494 or 74·7 per cent. during the first five years, 119 or 18·0 per cent. during the following quinquennial period, 18 or 2·7 per cent. between 10-15 years, 27 or 4·1 per cent. between 15-60 years, and 3 or 0·5 per cent. at greater ages. To Fevers 902 deaths are ascribed, 43 or 4·8 per cent. of them between birth and the end of the fourth year, 64

or 7·1 per cent. between 5-10 years, 89 or 9·9 per cent. between 10-15 years, 677 or 75·0 per cent. between 15-60 years, and 29 or 3·2 per cent. at ages over this. Of these, Typhus caused 63 deaths, 57 of them between 15-60 years of age. Enteric or Typhoid caused 814 deaths, 34 or 4·2 per cent. during the first five years of life, 59 or 7·3 per cent. between 5-10 years, 85 or 10·4 per cent. between 10-15 years, 614 or 75·4 per cent. between 15-60 years, and 22 or 2·7 per cent. at ages beyond this. Relapsing and Cerebro-Spinal Fever each caused 2 deaths, and Simple or Ill-defined 21. Diarrhœa and Dysentery caused 2271 deaths in all, 1732 or 76·3 per cent. of them between birth and the beginning of the fifth year, 30 or 1·3 per cent. between 5-15 years, 192 or 8·4 per cent. between 15-60 years, and 317 or 14·0 per cent. at over 60. Syphilis caused 229 deaths, 186 of them or 81·2 per cent. during the first quinquennial period of life. Erysipelas caused 177 deaths, 62 or 35·0 per cent. during the first period, 59 or 33·4 per cent. between 15-60 years, and 52 or 29·4 per cent. at a more advanced age. Puerperal Fever caused 227 deaths during the years of child-bearing. The deaths from Croup may also be noted, viz.:—189 in all, of which 175 or 92·6 per cent. are recorded as during the first five years of life, and 13 during the second.

Zymotic disease in Scotland is the ascribed cause of death to 278 individuals in every hundred thousand of the inhabitants as estimated, and equal to 15·09 per cent. of the total mortality. In the Principal Town Districts the rate per hundred thousand of the population is 323, or 15·99 per cent. of all the deaths; in the Large Town Districts the corresponding ratios are 302, and 15·98 per cent.; in the Small Town Districts they are 274, and 15·70 per cent.; in the Mainland-Rural Districts they are 195, and 11·98 per cent.; and in the Insular-Rural Districts they are 183 to population, and 12·14 per cent. to deaths.

Tables XXX. and XXXI. indicate the mortality rate from Zymotics in the Principal Towns. Thus in Glasgow this class of disease is the cause of 357 deaths in every hundred thousand of its estimated population, equal to 16·89 per cent. of the total deaths. Hooping Cough is accountable for 98 of the former proportion, Measles for 75, Diarrhœa and Dysentery for 67, Fevers for 32 (31 of those being Enteric and 1 Typhus), Scarlet Fever for 26, and Influenza and Diphtheria each for 15.

In Edinburgh, 275 persons per hundred thousand of the population succumbed to Zymotics during the year, or 14·01 per cent. of the deaths were of this nature. To Diarrhœal Affections 58 of the former ratio are due, to Measles 48, to Hooping Cough 44, to Influenza 40, to Scarlet Fever 30, and to Diphtheria and Fevers each 15 (11 of the latter Enteric or Typhoid and 3 Typhus).

In Dundee, 347 per hundred thousand of the population died from Zymotics, equal to 16·42 in every hundred of the total deaths. Diarrhœa and Dysentery accounted for 93 of this, Measles for 85, Hooping Cough for 55, Scarlet Fever for 27, Influenza for 24, Diphtheria for 18, and Fever for 10 (5 of those Enteric and 4 Typhus).

In Aberdeen, Zymotics caused 264 deaths in every hundred thousand of

the inhabitants as estimated, equal to 13·80 per cent. of the total mortality. To Hooping Cough 75 of the former is due, to Diarrhœal Affections 56, to Scarlet Fever 27, to Influenza 25, to Diphtheria 24, to Measles 15, and to Fevers 11 (10 Typhoid and 1 Typhus).

In Govan and Partick, 304 deaths per hundred thousand of the population were so caused, or 18·21 per cent. of the total mortality. Hooping Cough is the ascribed cause of 95 of this, Diarrhœa and Dysentery of 72, Measles of 62, Fevers of 16 (all Enteric), Scarlet Fever and Diphtheria each of 11, and Influenza of 9.

In Leith, the proportion to the population as above is 211, or 11·82 per cent. of all deaths. For 80 of the former ratio Diarrhœa and Dysentery is responsible, for 35 Measles, for 24 Hooping Cough, for 13 Diphtheria, for 12 Influenza, for 11 Fevers (all Typhoid or Enteric), for 8 Scarlet Fever, and for 1 Small-pox.

In Paisley, 400 deaths from Zymotics in every hundred thousand of the population occurred during the year, equal to 19·09 per cent. of the total deaths. To Hooping Cough 133 are due, to Diarrhœa and Dysentery 93, to Fevers 58 (54 Enteric, 1 Typhus, and 3 Simple or Ill-defined), to Measles 46, to Influenza 34, to Diphtheria 17, and to Scarlet Fever 8.

In Greenock, the mortality rate from the same is 344 per hundred thousand of population, and 16·08 per cent. of the total deaths. 97 of the former are due to Diarrhœal Affections, 64 to Hooping Cough, 39 to Scarlet Fever, 38 to Fevers (of these 35 being Enteric), 28 to Diphtheria, and 18 to Measles, and to Influenza.

In Coatbridge, 366 in every hundred thousand died from those diseases, equivalent to 18·06 per cent. of all the deaths. 157 of them are due to Measles, 64 to Diarrhœa and Dysentery, 52 to Hooping Cough, 44 to Fevers (41 Enteric and 3 Simple or Ill-defined), and 12 to Scarlet Fever, to Influenza, and to Diphtheria.

In Perth, the proportion to population is 223, the percentage of the total mortality being 10·90. Of the former, 49 are ascribed to Diarrhœa and Dysentery, 33 to Hooping Cough, 30 to Scarlet Fever, 26 to Influenza, 20 to Measles, 13 to Diphtheria, and 10 to Fevers (all Typhoid).

In Kilmarnock, 305 deaths per hundred thousand of population, or 16·55 per cent. of the total deaths, are due to Zymotics. To Diarrhœa and Dysentery 59 of the former are ascribed, to Scarlet Fever, and to Fevers 56 (the latter all Enteric), to Measles 49, to Influenza 33, to Diphtheria 20, and to Hooping Cough 10.

But 2 deaths from Small-pox were registered throughout Scotland during 1898. Both were females, one *aet.* 17, the other 64 years.

Measles caused 2290 deaths during the year and is at the rate of 54 in every hundred thousand of the population, forming 2·94 per cent. of the total mortality. Of those, 1180 are males and 1110 females. In each of the three Urban Districts the death-rate from Measles is above that for Scotland, the highest, 82, occurring in the Large Town Districts. The lowest rate, 14, falls to the Insular-Rural Districts.

From Scarlet Fever there are 909 deaths, affording a rate of 22 per hundred thousand of population, and 1·17 per cent. of the specified deaths. Of those, 435 are males and 474 females. Here again the Town Districts show the highest rates, that in the Principal Town Districts being 25, in the Large Town Districts 22, and in the Small Town Districts 24 to the inhabitants as above. The lowest rate, 4, occurs in the Insular-Rural Districts.

To Influenza 1291 deaths are ascribed, giving a rate of 31 in every hundred thousand of the population, and 1·66 per cent. of all the deaths:

in the Mainland-Rural, and 46 in the Insular-Rural Districts, the lowest rate, 22, falling in the Principal Town Districts.

Hooping Cough is the cause of 2476 deaths, giving a death-rate of 59 per hundred thousand of the population, and forming 3·18 per cent. of the total mortality in Scotland: the males number 1073, the females 1403. The highest death-rate from this disease occurs in the Principal Town Districts, 76, and in the Large Town Districts, 60, the others being 53 in the Small Town Districts, 31 in the Mainland-Rural Districts, and 55 in the Insular-Rural Districts.

Diphtheria is the cause of 661 deaths, at the rate of 16 per hundred thousand of population, or 0·85 per cent. of all the specified deaths: of those 328 are males and 333 females. There is no marked difference in the death-rate from this disease in the different districts, there being 16 in the

Principal Town Districts, 17 in the Large Town Districts, 16 in the Small Town Districts, 14 in the Mainland-Rural Districts, and 15 in the Insular-Rural Districts.

Continued Fevers together caused 902 deaths, equal to 21 per hundred thousand of population, or 1·16 per cent. of the total deaths: males 493, females 409. The highest rate, 25, occurs in the Principal Town Districts; the lowest, 15, in the Mainland-Rural Districts. Of those Fevers, Typhus caused 63 deaths in Scotland. Enteric or Typhoid caused 814 (males 448, females 366), giving a death-rate of 19 per hundred thousand, or 1·05 per cent. of all deaths. Relapsing Fever caused 2 deaths, as also did Cerebro-Spinal, and Simple or Ill-defined Fever caused 21. Table XXXVII. indicates how 127 of the deaths from Enteric Fever were registered in the Rural Districts, forming 78·88 per cent. of the total fever mortality in the same, while 687 or 92·71 per cent. are the corresponding in the Town Districts. Typhus caused 28 deaths in the Rural Districts, 35 in the Urban. To Diarrhœa and Dysentery together are ascribed 2271 deaths, giving a mortality rate of 54 in every hundred thousand of the population, or 2·92 per cent. of all specified deaths: males 1172, females 1099. The rate to population as above is in the different districts as follows:—70 in the Principal Town Districts, 59 in the Large Town Districts, 49 in the Small Town Districts, 30 in the Mainland-Rural Districts, and 14 in the Insular-Rural Districts.

From Rheumatism 419 deaths occurred, equal to 10 in every hundred thousand of the inhabitants (males 181, females 238) and apparently most marked in the Rural Districts.

To Cancer 3453 deaths are ascribed during the year throughout Scotland, being at the rate of 82 per hundred thousand of population (male rate 65,

female 98), and equivalent to 4·44 per cent. of all deaths. The highest rate 95 occurs in the Mainland-Rural Districts, followed by the Principal Town Districts with a rate of 82, the Small Town Districts with one of 76, the Large Town Districts with one of 75, and the Insular-Rural Districts with one of 63. The rates in the Principal Towns are to be found on Tables XXX. and XXXI., from the former of which it is seen that of every hundred thousand living in Edinburgh there were 120 deaths from Cancer, in Dundee the ratio is 97, in Kilmarnock it is 85, in Aberdeen it is 84, in Paisley it is 81, in Perth it is 76, in Glasgow it is 73, in Coatbridge it is 67, in Leith and in Greenock it is 63, and in Govan and Partick it is 44.

From diseases of a Tubercular nature there are 10,140 deaths during the year, males 5119, females 5021, together giving a mortality rate of 240 in every hundred thousand of estimated population, and equivalent to 13·04 per cent. of the total specified deaths. The highest rates occur in the Urban Districts, being to population 277 in the Principal Town Districts, 258 in the Large Town Districts, 217 in the Small Town Districts, 191 in the Mainland-Rural Districts, and 183 in the Insular-Rural Districts. Of this class of disease Phthisis is the cause of by far the largest number of deaths, those for the present year being 7090, males 3557, females 3533, together equal to a death-rate of 168 per hundred thousand of population, and forming 9·12 per cent. of the total deaths. The deaths from Phthisis or Consumption were registered in each of the five districts per hundred thousand of their respective populations as follows:—In the Principal Town Districts the rate is 188, in the Large Town Districts 178, in the Small Town Districts 151, in the Mainland-Rural Districts 143, and in the

Insular-Rural Districts 158. Of the males who succumbed to Consumption 8·2 per cent. were under 15 years of age, 68·6 per cent. were between 15–45 years, and 23·2 per cent. were over 45; the corresponding proportions among the females being 12·1 per cent., 72·4 per cent., and 15·5 per cent. The death-rate from Phthisis in the Principal Towns to their population as estimated is 209 in Greenock, 206 in Dundee, 198 in Leith, 197 in Glasgow, 188 in Paisley, 186 in Edinburgh, 184 in Perth, 174 in Coatbridge, 171 in Aberdeen, 164 in Kilmarnock, and 126 in Govan and Partick. Tabes Mesenterica caused 947 deaths throughout Scotland during the year—males 491,

-	-	-	-	-	-	-	-	-	-	-	1

inhabitants, and forms 11·60 per cent. of the total deaths; the males number 4539, the females 4487. The highest rates are in the Principal Town Districts, 225, and Large Town Districts, 229—both above that for Scotland. The lowest rate, 161 per hundred thousand, occurs in the Insular-Rural Districts. In the Principal Towns the equivalent mortality from such diseases to the population is 315 in Perth, 286 in Greenock, 261 in Paisley, 237 in Aberdeen, 229 in Glasgow, 226 in Edinburgh, 224 in Coatbridge, 197 in Dundee, 194 in Govan and Partick, 185 in Leith, and 148 in Kilmarnock. Among diseases of the Nervous System, Apoplexy caused 3148 deaths—males 1435, females 1713; Paralysis caused 1573—males 740, females 833; Epilepsy 224—males 120, females 104; and Convulsions is the ascribed cause of 1195—males 683, females 512.

Diseases of the Circulatory Organs ended the lives of 7070 individuals, being at the rate of 168 per hundred thousand of the population, and forming 9·09 per cent. of all deaths—males 3353, females 3717. In the Mainland-Rural Districts alone is the rate—179—above that for Scotland, and the lowest rate falls in the Insular-Rural Districts—viz., of 115. In the Principal and Small Town Districts the rate is 167, and in the Large Town Districts 164. As to the Towns, the highest rate to population is in Edinburgh, 209, followed by Greenock and Perth each 204, Dundee 191, Aberdeen 169, Leith 160, Kilmarnock 157, Glasgow 156, Paisley 152, Coatbridge 105, and Govan and Partick 102.

Diseases of the Respiratory Organs account for 13,206 deaths, at the rate of 313 per hundred thousand of population, and 16·98 per cent. of all deaths—males 6980, females 6226. The rates in the Principal and Large Town Districts—382 and 319 respectively—are above that for Scotland, in the others being below it—viz., 265 in the Small Town Districts, 234 in the Mainland-Rural Districts, and 232 in the Insular-Rural Districts. They appear in much the same order when the proportion is taken in connection with the total deaths; thus, in Scotland 16·98 per cent. of all the deaths are caused by diseases of the Respiratory Organs: the percentage in the Principal Town Districts is 18·90, in the Large Town Districts 16·91, in the Small Town Districts 15·26, in the Mainland-Rural Districts 14·40, and in the Insular-Rural Districts 15·43. Bronchitis caused the death of 2817 males and 2972 females; Pneumonia of 3217 males and 2396 females; and Croup of 104 males and 85 females. Among the towns, the highest proportion of deaths from diseases of this nature to each hundred thousand of the inhabitants occurs in Glasgow, 429, followed by Dundee with a ratio of 419, Coatbridge with one of 410, Govan and Partick with one of 378, Greenock with one of 349, Perth with one of 339, Aberdeen with one of 338, Leith with one of 336, Paisley with one of 329, Edinburgh with one of 314, and Kilmarnock with one of 275.

From diseases of the Digestive System there are 6021 deaths, at a rate of 143 per hundred thousand of the population, and forming 7·74 per cent. of the total specified mortality—males 2981, females 3040. The rate in each of the three great Urban Registration Districts is higher than that for Scotland, the reverse being the case in the two Rural Districts—the highest rate—152 to population—occurring in the Small Town Districts, the lowest—98—in the Insular-Rural Districts. In the Principal Towns the rate per hundred thousand of their populations is 177 in Kilmarnock, 176 in Aberdeen, 168 in Paisley, 160 in Dundee, 151 in Glasgow, 146 in Leith, 140 in Edinburgh, 137 in Coatbridge, 135 in Perth, 120 in Greenock, and 119 in Govan and Partick. Enteritis caused 1988 deaths—1015 males

973 females; Peritonitis caused 772 deaths—males 384, females 388; Hernia caused 162 deaths—males 72, females 90; Liver Disease caused 793 deaths—males 418, females 375; Ileus, Stricture of the Intestine, and Intussusception together caused 409 deaths—males 211, females 198.

Diseases of the Urinary Organs caused 2024 deaths in Scotland during 1898, giving a mortality rate of 48 in every hundred thousand of its inhabitants, and forming 2·60 per cent. of the total deaths—males number 1175, females 849. In none of the five great registration districts does the rate from those diseases differ much from that for the country at large. Acute Nephritis caused 478 deaths, Bright's Disease 852, Calculus 27, Diseases of the Bladder and Prostate 391, and to other morbid conditions of the same system not mentioned above, 176 deaths are credited.

From diseases of the Organs of Reproduction or Generation 573 deaths occur, or 14 per hundred thousand of the population, and 0·74 per cent. of all deaths—males 25, females 548. Of those deaths 63 are due to Ovarian disease, and 105 to Uterine affections. Diseases incidental to Parturition, not including Puerperal Fever, to which latter 227 deaths are due, cause 351—together a total of 578.

From diseases of the Organs of Locomotion—bones and joints—there are 313 deaths, equal to 7 in every hundred thousand of the population and 0·40 per cent. of all the deaths—males 188, females 125.

To diseases of the Integumentary System 180 deaths are ascribed—males 96, females 84.

Developmental diseases, not including Old Age, are the cause of 2705 deaths—males 1560, females 1145. Of those, Premature Birth accounts for 2191, Atelectasis for 157, Cyanosis, Spina Bifida, and other congenital defects for 357.

To Old Age 3980 deaths are ascribed, affording a mortality rate of 94 in every hundred thousand of the population, and equivalent to 5·12 per cent. of the total deaths—males 1533, females 2447. Between the ages of 95 and 100 years 45 men and 84 women succumbed, while two of the former sex and 10 of the latter had attained the age of 100 years or over it. One of the men was a portioner and cowfeeder *aet.* 101; the other a shepherd who attained the patriarchal age of 109 years. Four of the women were 100 years of age at death—one the widow of a seaman, another the daughter of a farmer, the third the widow of a calico printer, and the fourth the widow of a forester. One woman was *aet.* 102, a pauper and widow of a joiner; one was *aet.* 103, a pauper, formerly a servant; two were *aet.* 104, one was *aet.* 105, and another *aet.* 109—the four latter all being widows.

From Violence there are 3186 deaths, a rate of 76 per hundred thousand of population (male rate 115, female rate 38), forming 4·10 per cent. of all deaths—males 2348, females 838. Those due to Violence other than Accident are 278—males 206, females 72—and of those 15 are Homicidal and 262 Suicidal—the male suicides being 198 and the female 64 in number. Accident or Negligence is the cause of 2908 deaths—males 2142, females 766. Of the Accidental deaths 154 occurred in Mines or Quarries —males 150, females 4; Railways are the cause of 236—males 229, females 7; and from accidents with other Vehicles than Railways and by Horses there are 159 deaths—males 138, females 21. Machinery accidents number 66—all males but 2. Accidental Drowning caused the death of 529 males and 62 females, and Suicidal Drowning ended the lives of 46 males and 20 females. From Burns and Scalds 337 deaths occurred—males

140, females 197; from Suffocation 356 died—males 178, females 178—and of those 190 occurred in bed to 86 males and 104 females. Seventy-five males and 39 females were accidentally poisoned, while 17 males and 3 females ended their own lives in a similar manner.

The poisons by which death was accidentally caused are:—Laudanum, in the case of 20 males and 12 females; Morphia, of 1 male; Chloroform, of 10 males and 7 females; Ether, of 1 female; Chloral Hydrate, of 1 male; Bromide of Potassium, of 1 female; Alcohol, of 12 males and 3 females; Carbolic Acid, of 3 males and 2 females; Coal Gas, of 1 male and 4 females; Carbonic Acid Gas, of 5 males and 1 female; Sulphur Fumes, of 1 male; Ammonia Vapour (Explosion in Ice Works), of 3 males; Strychnia, of 2 males; overdose of Antifebrine, of 1 male; Phosphorus, of 2 females; Lead, of 3 males; Oxalic Acid, of 1 male; Hydrocyanic Acid, of 1 male; overdose of Epsom Salts, of 1 female; Arsenic, of 1 male; Cyanide of Potassium, of 1 male; Santonin, of 1 female; an Irritant poison, of 1 female; Weed Killer, of 1 male; a Ptomaine, of 4 males and 2 females; Bite from an Adder, of 1 male; kind not stated, of 2 males and 1 female.

The poisons by which Suicide was effected were—Laudanum, by 9 males and 1 female; Morphia, by 1 male; Hydrocyanic Acid, by 2 males; Aconite and Belladonna, by 1 female; Carbolic Acid, by 2 males; Oxalic Acid, by 1 male and 1 female; Bichromate of Potash, by 1 male; the Poison not stated, by 1 male.

Table XXXIX*a*. shows the methods by which Suicide was accomplished in Scotland and in its groups of Districts, its Counties, and Principal Towns. Thus, of the 262 suicides, 6 males and 1 female effected their purpose on railways; 22 males and 1 female shot themselves; 44 males and 11 females cut or stabbed themselves to death; 9 males and 5 females threw themselves from a height; 46 males and 20 females drowned themselves; 54 males and 22 females hanged themselves; 17 males and 3 females took poison; and 1 female ended her life in some way not specifically mentioned. The suicides in the different Districts are as follow:—In the Principal Town Districts 88 males and 20 females took their own lives; in the Large Town Districts 32 males and 9 females did likewise; in the Small Town Districts 29 males and 16 females; in the Mainland-Rural Districts 44 males and 14 females; and in the Insular-Rural Districts 5 males and 5 females ended their own existence.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of the year are the Notes made by Dr. Buchan, under the direction of the Council of the Scottish Meteorological Society, which appear in the Registrar-General's Quarterly Reports:—

The weather of *January* was characterised by a very high barometric pressure, accompanied with an unusually low monthly range; a mean temperature higher than any hitherto recorded for January, with nearly the average daily range of temperature; a very low mean humidity, the only lower mean being 79 in 1895; a rather small rainfall, falling on one day fewer than usual; and seven days excess above the average of S.W. winds and blowing with a force considerably above the average.

The mean barometric pressure was 30·078 inches, being 0·298 inch above the average. Pressure was relatively much greater in the south than in the north, and a little greater in the west than in the east, resulting in an extraordinary prevalence of very strong west-south-westerly winds. In Wigtownshire the excess of pressure was 0·330 inch, whereas at North Unst it was only 0·143 inch. The mean temperature was 42°·9, or 5°·8 above the average, the excess being equally distributed between the days and the nights. The next highest mean January temperature since 1856 was 41°·2 in 1882, or 1°·7 lower than last January. For Edinburgh the mean was 44°·6, the next highest there for the past 134 years being 43°·8 in 1796, 42°·1 in 1846, and 42°·0 in 1882. This excess of temperature was decidedly greater at southern than at northern stations, and also at inland than at coast stations. The absolutely highest temperature was 60°·0, on the 19th, at Gordon Castle, and the lowest, 21°·5, on the 5th, at Dalnaspidal. These are unusually high maximum and minimum temperatures for the month; indeed as regards the minimum of 22°·5 no higher minimum temperature for all Scotland has been previously recorded. Another notable feature of the temperature is that at fourteen of the stations it did not fall below freezing. The mean rainfall was 3·14 inches, or 20 per cent. under the average Its distribution over Scotland was extremely unequal. Thus everywhere south of the Grampians it was under the average, the amounts collected over large breadths varying from one-half to one-fourth part of the average. On the other hand the amounts were above the average on the south shore of the Moray Firth, along the Caledonian Canal from Inverness to Loch Linnhe, and in Orkney and Shetland, the great excess above the average being 100 per cent. at Deerness and 50 per cent. at Fort-William and Fort-Augustus. At the Ben Nevis Observatory 27·08 inches of rain fell, and the daily amounts twelve times exceeded an inch.

The weather in *February* was characterised by a very low mean barometric pressure, with a low monthly range; a mean temperature very little under the average, with a mean daily range nearly a degree above the average; an unusually low humidity, there having been previously only one lower, viz., 77 in 1895; a mean rainfall above the average, falling on three days more than the average; a very great excess of westerly winds, south-west being one day, west four days, and north-west two days in excess of the average; blowing with a mean strength greater than any previously recorded in February. The mean barometric pressure was 29·717 inches, or 0·136 inch under the average. It was 0·037 inch under the average at the Mull of Galloway, and 0·310 inch at North Unst; 0·073 inch at Skerryvore, and 0·161 inch at the Isle of May, being thus much more than the average in the north than in the south, and in the east than in the west. Hence very steep mean gradients were formed for very strong westerly winds. The mean temperature was 38°·2, or 0°·2 under the average, the days being 0°·2 above and the nights 0°·5 below the average. Its distribution was very unequal. It was under the average to the north of a line drawn from Skerryvore through Glencarron to Kinnaird Head, and thence at all strictly coast stations southward to the Tweed, the deficiency being, in general, about a degree. In all other parts of Scotland, temperature w[as] above the average, the greatest excess, about 1°·5, being in the sou[th]-western counties. The absolutely highest was 59°·0 on the 1st at [Dun]-Castle, and 52°·5 on the 24th at Braemar, the black-bulb being – 1° [at] Braemar on the same day. The mean rainfall was 3·90 [in]. [ab]verage. [fr]e 18th to

or 27 per cent. above the average. On the eastern side of the watershed from Kinnaird Head to the Cheviots the rainfall was under the average, the greatest deficiency, fully half the average, occurring from the South Esk in Forfarshire to the Tweed. Everywhere else in Scotland, except at a very few isolated stations, it was above the average, and in many places in the north and west very largely so. Thus the percentages above the average were 175 at Stromness, 152 at Barrahead, 146 at Kirkwall, and more than double the average at Deerness, Thurso, Fearn, Fort-Agustus, and Turnberry Castle. At several stations the absolute amounts were very large, being 15·22 inches at Glenquoich, more than 10 inches at Lochbuie, Fort-William, and Glencarron; whilst at the Ben Nevis Observatory 30·09 inches were collected. At western stations the only generally fair days were from the 21st to the 24th, but at eastern stations, the number of rainless days was considerable.

The weather of *March* was characterised by a barometric pressure a little above the average, with a very low monthly range; a mean temperature very nearly the average, with a range considerably above it; a very low mean humidity; a mean rainfall somewhat less than the average, falling on one day more than the average; and a greater prevalence of northerly winds. The mean barometric pressure was 29·890 inches, being 0·064 inch above the average. The excess was greater at western and southern than at eastern and northern stations, resulting in a greater northing in the winds and a drier and clearer atmosphere. The mean temperature was 30°·6 or 0°·2 above the average, the days being 0°·6 above, but the nights 0°·2 under the average. To the north of a line from Wick to Stornoway, and to the south of a line from Ayr to Berwick, temperature was under the average—very slightly in the north, but in the south nearly a degree. But in the intermediate districts, which included nearly the whole of Scotland, temperature was above the average, the excess over considerable districts being fully a degree. The times of lowest temperature were the first week and the last week of the month. The absolutely highest temperature was 61°·0 on the 17th at Peterhead, and the lowest 8°·5 on the 8th at Braemar. The mean rainfall was 2·27 inches, or 19 per cent. under the average. The rainfall was under the average to the south of a line from Ardnamurchan to Kinnaird Head, but above it to the north of the same line, or over that part of Scotland most open to the northerly winds which prevailed. Over districts in the north-west the excess was above 50 per cent.; whereas over wide areas south of the Grampians the amounts collected generally were only from one-fourth to one-half the average. Heavy rains fell in the west Highlands from the 16th to the 18th, the amounts on these three days being 4·45 inches at Glencarron, 3·81 inches at Fort-William, and 3·95 inches at Corran. On the 18th, 6·09 inches fell at the Ben Nevis Observatory. The brilliant aurora of the 15th was very widely observed.

The weather of *April* was characterised by a rather low barometric pressure, with a particularly low monthly range; a high mean temperature, with a singularly small mean daily range; an average humidity; a mean rainfall greater than has been recorded in April since 1872, falling on five days in excess of the average; and seven days excess of winds from S.E., S., S.W., and W., blowing with a force much in excess of the average. The mean barometric pressure was 29·798 inches, or 0·095 inch under the average. The diminution of pressure from the average was much greater at western than at eastern stations. Thus it was 0·071 inch at Peterhead, whereas at Monach Lighthouse it amounted to 0·157 inch, a geographical distribution

which fully accounts for the extraordinary prevalence of southerly winds and high temperature noted above. The mean temperature was 45°·6, or 1°·5 above the average, the days being 0°·8 and the nights 2°·3 in excess. Thus the high temperature was principally occasioned not by any excess of sunshine, which was 48 hours under the average, but by the unwonted prevalence of winds from the warm south. The mean temperature but slightly exceeded the average at coast stations from the Firth of Tay to Kinnaird Head and in Shetland; whereas on the west side of the watershed and over the outlying Hebrides, temperature was from 2°·0 to 3°·0 above the average. The absolutely highest temperature was 70°·0 on the 22nd, at Aberlour, and the lowest, 19°·0, on the 5th, at Stobo. The mean rainfall was 3·61 inches, or 68 per cent. above the average. The rainfall was distributed over the country with very great irregularity. In comparatively restricted districts in Mid-Lothian, Galloway, and in the counties of Ayr, Inverness, and Elgin, it was under the average, the amounts at Ardwell and Inverness being respectively 40 and 33 per cent. under the average. On the other hand, the amount was well-nigh unprecedentedly large at the eastern stations situated between the lower reaches of the Tay and the Don, the excess above their averages being 200 per cent. at Lednathie, 220 per cent. at Montrose Asylum, and 308 per cent. at Johnstone Lodge, near Laurencekirk. This torrential rainfall, which was limited to the last four days of the month, fell with strong east-south-easterly winds. On these four days there fell at Johnstone Lodge 6·47 inches.

The weather of *May* was characterised by a rather low barometer, with one of the highest monthly ranges yet recorded for May; a mean temperature 1°·3 under the average, with a mean daily range slightly under the average; a mean humidity nearly the average; a mean rainfall a little above the average, falling on two days more than the average; and five days excess of northerly and westerly winds. The mean barometric pressure was 29·830 inches, or 0·103 inch less than the average. Pressure was much more below the average at eastern and northern than at western and southern stations, the amount being 0·124 inch at Duns and 0·127 at North Unst, as compared with 0·088 inch at Dumfries and 0·066 inch at Monach. Gradients were thus formed for the great excess of north-westerly wind which prevailed. The mean temperature was 47°·7, or 1°·3 less than the average, the difference being nearly equally partitioned between the days and the nights. In the south-west, from the coast of Ayrshire to Skye, the mean temperature was nearly the average, but in the north and east and inland situations it was fully two degrees under the average at many places, the greatest deficiency being in the eastern parts of Inverness-shire and in the counties of Berwick, Roxburgh, and Peebles. The absolutely highest temperature was 74°·0 on the 21st at Roshven, and the lowest, 22°·0, on the 14th at Stobo. The mean rainfall was 2·62 inches, or 15 per cent. above the average. Its distribution among the stations was extremely irregular, being under the average in the counties of Berwick, Fife, the inland districts of Galloway, Lower Clydesdale, Western Perthshire, and the south of Inverness-shire. Elsewhere it was above the average. The greatest excess, fully double the average, was at Kirkwall, Deerness, Thurso, Dunrobin, Tarbetness, and Perth; and over large breadths bordering the Moray Firth, over the Outer Hebrides, south of Argyll, and in the counties of Ayr and Wigtown, the excess amounted to half the average. Comparatively little rain fell from the 6th to the 9th, and from the 18th to

the 27th. The hours of sunshine numbered 175, being only 12 hours short of the average.

The weather of *June* was characterised by a mean barometric pressure very little under the average, with a rather large monthly range; a mean temperature about half a degree under the average, with a mean daily range the average; the average mean humidity; a mean rainfall a little under average, falling on one day more than the average; and the direction of the wind closely approximate to the average. The mean barometric pressure was 29·927 inches, or 0·014 inch under the average, and the distribution of the pressure over the country was normal. The mean temperature was 54°·4, or 0°·4 under the average, this small deficiency being equally distributed between the days and the nights. Temperature was from half a degree to fully a degree under the average to the east of a line drawn from Kelso through Dundee to Aberlour, and to the north of a line drawn from this point through Inverness to North Unst. Over the rest of Scotland it exceeded the average, the excess at the more strictly inland stations rising to a degree. The absolutely highest temperature was 80°·0 on the 17th at Smeaton, and the lowest, 31°·0, on the 4th at Dalnaspidal. The mean rainfall was 2·32 inches, or 7 per cent. less than the average. Its distribution over Scotland was very irregular, being above the average in Shetland, Orkney, shores of the Pentland Firth, Outer Hebrides, the north-west of Argyll, and south-west of Ayrshire; but elsewhere it was under the average. The deficiency was about 50 per cent. over a wide district bounded on the west by a line drawn from Dundee through Kingussie to Cromarty. On the other hand, the greatest rainfall generally was in the Outer Hebrides, where it amounted to 53 per cent. at Monach. Very little rain fell from the 8th to the 16th, and from the 27th to the end of the month. The month was remarkable for a singular absence of heavy daily falls. Thunder is reported from 24 stations, giving an average of two for each station.

The weather of *July* was characterised by a mean barometric pressure very greatly in excess of the average, with a monthly range under it; a mean temperature a little less than the average, with a mean daily range very greatly above the average, having been in previous years exceeded only in 1868 and 1885, the range in these years being respectively 18°·2 and 17°·5; a mean humidity extraordinarily low, never having been observed lower during the past 43 years; a small rainfall, being less than half the average, falling only on 10 days, or five days fewer than the average; and a large excess of N.W. and N. winds. The mean barometric pressure was 30·055 inches, or 0·180 inch above the average, being one of the highest July means hitherto recorded. The excess was greatest in the south-west of the country, where it was 0·230 inch, and least in the north-east, where it was only 0·100 inch. This distribution of the pressure gave the excess of northerly winds which prevailed, bringing in their train a drier atmosphere, more sunshine, a temperature rather under the average, and a rainfall much less than the average both as regards amount and frequency. The mean temperature was 56°·5, or 0°·6 under the average, the days being 0°·4 above and the nights 1°·8 under it, the relatively higher temperature of the days being occasioned by the greater sunshine, and the lower temperature of the nights by the northerly winds together with the drier state of the air. In the extreme north the temperature was generally 2°·0 and in the extreme south 1°·0 under the average; whereas it was nearly half a degree above the average over the intermediate district bounded on the north by a line

drawn from Corran to Aberdeen and on the south by a line from Rothesay to North Berwick. The absolntely highest temperature was 83°·0 on the 15th at Smeaton, and the lowest 32°·0 on the 30th at North Esk Reservoir. The mean rainfall was 1·52 inch, or 52 per cent. under the average. This is one of the smallest rainfalls hitherto recorded for July, smaller amounts having been observed only in 1863, 1868, and 1878. In Orkney the average of the month was slightly exceeded, but over all other parts of the country it was under the average, the fall being less than a fourth part of the average over wide districts. The greater part of the rain fell from the 2nd to the 6th, 16th to the 18th, and 27th to the end of the month. Strong winds and storms were of rare occurrence, but the frequency of fog, chiefly in the west and north, was a marked feature of the meteorology of the month.

The weather of *August* was characterised by a mean barometric pressure a little higher than the average, with a monthly range slightly under the average; a mean temperature a little less than a degree above the average, with a mean daily range also a little above the average; a mean humidity less than the average; a mean rainfall a good deal above the average, falling on two days more than the average; the direction showed two days excess of west wind, the strength of the wind being nearly the average. The mean barometric pressure was 29·881 inches, or 0·030 inch above the average, with a range slightly less. The pressure was relatively higher at southern and eastern stations than at stations in the south and west, resulting in an excess of westerly winds. The mean temperature was 57°·3, or 0°·7 above the average, the days being 1°·1 and the nights 0°·3 in excess. The greatest excess, about 1°·5, occurred in south-western districts, and the least in strictly inland situations. The excess was in most cases less at inland stations than near the coast. The absolutely highest temperature was 83°·0 on the 12th at Smeaton; and the lowest 32°·3 on the 25th at Braemar. The mean rainfall was 4·36 inches, or 20 per cent. above the average. The amount was very irregularly distributed among the stations. It was under the average to the east of a line drawn from Dunrobin to Fort-Augustus, Kingussie, Braemar, and Cupar, and in the counties of Berwick, Peebles, and Selkirk. The greatest deficiency, amounting to about one-third of the average, occurred at coast stations in the east. Everywhere else over the country the rainfall exceeded the average, that is at all places open to the westerly winds. The general excess varied from a fourth to half the average. The heaviest rains occurred during the first fortnight and last six days of the month, snd from the 12th to the end of the month thunder-storms with accompanying heavy showers were of rather frequent occurrence.

The weather of *September* was characterised by a mean barometric pressure very much above the average, with an exceedingly small monthly range; a mean temperature unusually high, having been previously exceeded only by the warm Septembers of 1865, 1890, and 1895, accompanied with a mean daily range unusually large; a mean humidity only very slightly under the average; a mean rainfall very little above the average, falling on one day fewer than the average; four days excess of south-westerly winds. The mean barometric pressure was 29·976 inches, or 0·132 inch in excess of the average, the excess being rather greater in the south and the east than in the north and west. Hence the greater prevalence of south-westerly winds. The type of the weather was strongly anticyclonic, and as in such cases barometric pressure exceeded the average in a greater degree at inland than at coast stations. The mean temperature

was 56°·0, or 3°·2 above the average, the days being 4°·2 and the nights 2°·2 in excess. Thus the abnormally high temperature was mainly occasioned by the dry atmosphere, clear skies, and strong sunshine of the prevailing anticyclones. The excess of temperature was greatest at inland and eastern stations from Sunderland to the Cheviots, the excess varying from 3°·2 to 4°·3. On the other hand, it was only 1°·0 in Shetland and little more than 2°·0 over the west coast from Cape Wrath to the Solway. The warmest week was that ending on the 10th, when the excess above the averages at the inland stations Marchmont, Braemar, Kingussie, and Lairg was 11°·0, while for the same week it was only 4°·4 at Sumburgh Head. But at these inland stations the mean temperature for the last ten days of the month was 16°·0 lower than for the week ending the 10th. The absolutely highest temperature was 86°·2 on the 5th at Lairg, and the lowest 26°·0 on the 25th at Stobo. The above maximum is the highest hitherto recorded in September except 1868, when the maximum temperature was 86°·5. The mean rainfall was 3·73 inches, or 5 per cent. above the average. In Shetland, at south-western stations south of Clydesdale, and at eastern stations from the Moray Firth to the Cheviots, the rainfall was under the average, the amount collected in the more southern districts being only a little more than a fourth part of the average. Over the rest of the country it exceeded the average, the amount collected in the more southern districts being only a little more than a fourth part of the average. Over the rest of the country it exceeded the average, the excess being about 75 per cent. at Airds, Inveraray, and Dollar. The rainfall was light or *nil* from the 4th to the 7th, and 22nd to the 26th. The month was free from storms, except during the last three days, when a storm is reported in the south-west from Islay to the Solway. A remarkably fine aurora was seen on the 9th. It is interesting to note that during this remarkable month the rainfall at Ben Nevis Observatory was 24·81 inches, and the mean temperature 42°·6, or 4°·7 above the average. On the 20th the rainfall was 5·37 inches.

The weather of *October* was characterised by a mean barometric pressure all but the average, with a monthly range a little under it; a mean temperature the highest hitherto recorded for October, with a mean daily range

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1898, compared with the Mean of the Ten Years 1881-1890.

	YEAR 1898.			1881–1890.	
MONTHS.	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.
	°				°
January	42·9	6569	1005	1157	37·5
February	38·2	5970	914	1052	37·9
March	39·6	7802	1194	1139	38·9
April	45·6	7248	1109	1052	43·1
May	47·7	6978	1068	1031	49·0
June	54·4	6267	959	941	54·1
July	56·5	5919	906	916	56·5
August	57·3	6374	976	882	55·7
September	56·0	6259	958	847	52·6

YEAR	47·7	78,406	12,000	12,000	45·8

slightly less than the average; a mean humidity nearly the average; a mean rainfall a little above the average, falling on the average number of days; and an unusual prevalence of easterly winds and deficiency of westerly winds. The mean barometric pressure was 29·804 inches, being close to the average. The distribution of pressure over the country was very unusual, being above the average 0·093 inch at North Unst, and 0·030 inch at Aberdeen, but under it 0·007 inch at Stornoway, and 0·022 inch at Pinmore; and, with such a distribution of pressure, an unwonted predominance of easterly wind prevailed. The mean temperature was 50°·1, or 3°·7 above the average, and moreover the highest mean temperature yet recorded by the Scottish Meteorological Society for any October. The days were 3°·4 and the nights 3°·9 above the average. The excess of temperature was singularly uniform in all districts, being only a little higher at inland as compared with coast stations. The excess, however, was rather less in Orkney and Shetland, being at North Unst only 2°·0. With the exception of the 12th, 15th to the 18th, 30th and 31st, temperature may be regarded as having been phenomenally high for the time of the year. The absolutely highest temperature was 79°·8 on the 3rd at Lairg, and the lowest 26°·5 on the 17th at Lednathie. The mean rainfall was 4·42 inches, or 9 per cent. above the average. It was above the average at all stations on the east side of the country from the Don to the Tweed, this being the part of Scotland most exposed to the easterly

---

TABLE XLI.—Meteorology of Scotland for 1898, deduced from Observations made at 67 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1898, as stated in the Quarterly Reports.

1898.	Jan.	Feb.	Mar.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	YEAR.

winds. At many places the excess was very large, being above the average, in percentages, 160 at Haddington, 133 at Smeaton, 122 at Broomlands, near Kelso, and Perth, and 110 at Tillypronie. It was also above the average, but slightly, west of the Moray Firth from Cromarty northwards, and in Shetland. Over all other districts it was less than the average, particularly from Cape Wrath as far south as Islay, the general deficiency being about 50 per cent., these being the districts more completely protected from the rains of the easterly winds. The greater part of the rain fell during the latter half of the month, the first fortnight being generally dry. At many eastern stations the rainfall of the 17th and 18th was very heavy, the amounts, in inches, being 3·40 at Haddington and Perth, 2·87 at Dundee, and 3·21 at Marchmont.

The weather of *November* was characterised by a mean barometric pressure a good deal under the average, with a monthly range greatly under it; a mean temperature about a degree above the average, with a mean daily range also a degree above it; a mean humidity the average; a mean rainfall considerably above the average, falling on a day more than the average; and the winds nearly the average, both as regards force and direction. The mean barometric pressure was 29·753 inches, or 0·068 inch less than the average. The deficiency was pretty evenly distributed over the country, being only a little more pronounced in the extreme north than in the south. The mean temperature was 41°·7, or 1°·1 above the average, the days being 1°·5 in excess and the nights 0°·5. The excess of temperture was rather greater in the south than in the north, but on the whole it may be regarded as pretty evenly distributed among the stations. The absolutely highest temperature was 61°·0 on the 2nd at Edinburgh and the 12th at Glencarron; and the lowest 6°·0 on the 29th at Stobo. During the first three weeks the relatively high temperature of the previous month

---

TABLE XLII.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Diseases, in Eight of the Principal Towns of Scotland, during each Month of the Year 1898.

was continued, but during the last ten days of the month temperatures were much lower. The mean rainfall was 5·05 inches, or 32 per cent. above the average. This is rather a large mean rainfall for November. In a few detached districts in the counties of Shetland, Ross, Inverness, Argyll, Aberdeen. and in Galloway, the rainfall was under the average, but the deficiency anywhere scarcely exceeded 30 per cent. Everywhere else the rainfall exceeded the average, there being about 90 per cent. of excess at Stornoway, Thurso, Cupar, North Esk Reservoir, and Stobo Castle. On the first four days of the month strong westerly winds prevailed, accompanied with very heavy rainfalls, the amounts for these four days exceeding five inches at a good many places. The rains from the 23rd to the 25th were also very heavy. Snow frequently fell from the 21st to the 29th.

The weather of *December* was characterised by a mean barometric pressure somewhat less than the average, with a monthly range considerably above it; a mean temperature higher than any recorded since December 1857, which was 2°·4 higher; a mean daily range considerably above the average; an exceedingly low mean humidity, no lower having previously occurred, except in 1874; a mean rainfall phenomenal both as regards amount and manner of distribution among the stations; and an extraordinary predominance of west-south-westerly winds, blowing with a mean force only exceeded by the December of 1892. The mean temperature was 42°·6, or 4°·8 above the average, the days being 5°·3 and the nights 4°·2 in excess. The excess was small, scarcely amounting to a degree, in the extreme north of the Hebrides, Orkney, and Shetland; but it gradually increased on proceeding southwards till in inland situations south of the Grampians it exceeded 6°·0, and generally the excess was greater at east than at west coast stations. The absolutely highest temperature was 59°·0 on the 5th at Boyndie, and on the 25th at Airds; and the lowest 17°·0 on

---

the 31st at Aberlour and Lednathie. Except on the last two days of the month high temperatures ruled throughout. The mean rainfall was 6·07 inches, or 53 per cent. above the average. It is scarcely possible to point to a previous month when the amounts recorded at the different stations showed differences so extraordinary. To the east of a line from Haddo House, passing Perth, Loch Leven, Edinburgh, and Kelso, the rainfall was under the average, the deficiency being greatest at places near the coast from the Don to the Tweed, being about 50 per cent. It was also under the average over the extreme south-west of Galloway. In all other parts of the country it was above the average, rising to more than double the average over extensive breadths. The heaviest rainfalls were at places north of the Grampians, the largest, stated in percentages above their averages, being 219 at Glencarron, 212 at Kingussie, 203 at Stornoway, 185 at Cromarty, and 178 at Fort-William. The largest absolute rainfall at any of the stations was 23·20 inches at Fort-William; at Glencarron the amount was 21·65 inches, and at Stronvar, 18·01 inches. On the other hand, the three smallest amounts were 1·03 inch at Haddington, 1·17 inch at Arbroath, and 1·35 at Dundee. Falls of more than an inch a day were frequent during the month. Widespread storms occurred on the 1st to 2nd, 7th to 10th, 14th, 18th to 19th, 22nd to 23rd, 27th, and 31st.

Tables XL. and onwards are prepared as usual to illustrate in some degree the connection between the general mortality, as also that of certain diseases, and the meteorological conditions of the successive months of the year, the data for which being supplied mainly from the returns made by observers in eight of the Principal Towns in the country.

Tables XL. and XLI. deal with Scotland as a whole, and from the former it is seen that the mean temperature for the year was 47°·7, considerably higher than the mean of a series of years placed alongside for comparison. The mean temperature of each month of the year under review—1898—is higher than those for the ten years, with the exception of May, which is lower, that for July being the same.

TABLE XLIV.—Monthly Deaths at Four Periods of Life in Eight of the Principal Towns of Scotland during the Year 1898, and Proportion at each Age in every Hundred Deaths per Month.

MONTHS.	Actual Number of Deaths in 1898.					Proportion at each Age in every Hundred Deaths per Month.

YEAR .	12,754	2,334	10,287	6,778	32,153	39·7	7·3	32·0	21·0	100

Table XLI. indicates in a general manner how the mortality is heaviest during or immediately after the colder and more inclement months of the year and least so during the warmer, inasmuch as 9·95 per cent. of the deaths were registered during March, 9·24 per cent. during April, 8·90 per cent. during May, 8·30 per cent. during January, 8·31 per cent. during December, 8·13 per cent. during August, 8·09 per cent. during October, 7·99 per cent. during June, 7·98 per cent. during September, 7·86 per cent. during November, 7·61 per cent. during February, and 7·55 per cent. during July.

Table XLII. shows the connection between certain atmospheric phenomena and the mortality from some diseases as occurring in eight of the Principal Towns of Scotland. Miasmatics caused their largest number of deaths during the months of April, May, June, and July, to be accounted for by the prevalence of Measles and Hooping Cough during the same period and the mortality from those being then at its greatest. Small-pox caused but one death in these towns during the year. From Scarlet Fever 40 deaths were registered during January and 46 during December, the smallest number—viz., 25—during June and September. Diphtheria as a cause of death is most in evidence during the early and late months, the opposite occurring during May, June, and July; and Fevers bulk most largely during the months of September, October, November, and December.

Diarrhœal affections are, as usual, registered as causes of mortality most markedly during the months of late summer and of autumn—July, August, September, and October.

Phthisis claims a heavy toll of the population during each month, but a larger number of deaths is registered during the first than during the second six months of this year.

The more acute diseases of the Respiratory Organs, as Bronchitis and Pneumonia are especially influenced by climatic conditions, the result being that the greatest mortality from those occurred during the early and late months of the year, the largest number of deaths being registered during

---

December	917	180	888	599	2584	946
YEAR	12,993	2,382	10,486	6,912	32,773	12,000

January, March, April, October, November, and December. Much the same is seen from the Table to be the case with diseases of the Heart and Blood Vessels, as also those of the Brain.

Tables XLIV. and XLV. are intended to indicate the comparative mortality at four periods of life during the successive months of 1898 in eight of the Principal Towns of Scotland.

The deaths of children (0-5 years) are registered in greatest numbers during the months of March, April, August, September, and October—those months in which Miasmatics generally and the more acute Pulmonary affections were specially fatal.

Among adolescents (5–20 years), deaths are registered in greatest numbers during February, March, April, May, June, and November—months when Miasmatics and Phthisis were particularly the cause.

Adults (20-60 years) suffered most during February, March, April, and May, the months when Phthisis and acute diseases of the Lungs claimed many lives.

Among the aged (60 and above) the mortality generally was at its maximum during the early and late—the more inclement—months of the year, especially the former, when Bronchitis and Pneumonia, so frequently the cause of death at this age, were marked.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, *5th July* 1900.

APPENDIX TABLES.

VACCINATIONS IN SCOTLAND—1898.

No. of Division, &c.	REGISTRATION GROUPS, DIVISIONS, AND COUNTIES.	Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccine Disease			Died before Vaccination.	Removed from District before Vaccination, or otherwise unaccounted for.	Total Births for 1898.
				On the ground of Constitutional Insusceptibility.	In respect of the Children having already had Small-pox.	On the ground of previous Successful Vaccination.

Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing To of 2000 Inhabitants and upwards are printed in small capitals, thus:—Carluke.

N.B.—An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situa or comprise more, or parts of more, than one Parish, and the component parts of these Districts will be found at page 474.

A dagger "†" is prefixed to those Districts which consist of only a part of a Parish of the same name.

* The actual number of Districts is 1071—many Parishes and Burghs having been divided into two or more Districts for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in the Tables, consist of 6 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has been to place *compound* names in the order in which they are pronounced.

REPORT.

TO THE RIGHT HON.

LORD BALFOUR OF BURLEIGH, K.T.,

His Majesty's Secretary for Scotland.

GENERAL REGISTRY OFFICE OF BIRTHS, ETC.,

EDINBURGH, *26th September*, 1901.

MY LORD,

I had the honour in 1900, in conformity with the requirements of the seventh section of the Scottish Registration Act, 17 and 18 Vict., cap. 80, to transmit to your Lordship, as Her late Majesty's Secretary for Scotland, General Abstracts of the Births, Deaths, and Marriages registered in Scotland during the year 1899, along with the usual Explanation and Commentary.

At the same time my Thirty-fifth Annual Report on Vaccination was transmitted, in accordance with the nineteenth section of the Scottish Vaccination Act, 26 and 27 Vict., cap. 108.

I have now the honour to transmit the Detailed Annual Report, together with the relative Tables, regarding the Births, Deaths, and Marriages registered in Scotland during the same year (1899).

I have the honour to be,

MY LORD,

Your most obedient Servant,

STAIR AGNEW,

Registrar-General.

REPORT TO THE REGISTRAR-GENERAL,

BY R. J. BLAIR-CUNYNGHAME, M.D., F.R.S.E.

SIR,

On the 31st of March a census of the population of Scotland was taken, and from the Summaries which were prepared by the Registrars throughout the country, obtained from the figures in the enumeration books as returned to them, we are able to give the populations estimated to the middle of the year calculated upon the numbers as ascertained at the censuses 1891 and 1901. The numbers now made use of from the latter

TABLE I.—Population estimated to the middle of each year; with the Number of Births, Deaths, and Marriages registered in Scotland during each of the Years 1855 to 1899, and their Proportion to the Population; also the Excess of Births over Deaths, the Illegitimate Births, and their Proportion to the Total Births.

YEARS	Estimated Population.	BIRTHS.		Deaths.	Marriages.	Excess of Births over Deaths.	Percentage to Population.			Percent. of Illegit. to Total Births.
		Total.	Illegit.				Births.	Deaths.	Marriages.

Principal Towns above 25,000 inhabitants. Large Towns above 10,000 and under 25,000 inhabitants. The Small Towns from 3000 to 10,000 inhabitants from 1855 to 1881, but from 1881 onwards the Small Towns from 2000 to 10,000 of population.

Small Towns have

this Report. The correct and revised numbers can only be obtained after careful and laborious extraction by the census staff from the very numerous enumeration books.

The total population of Scotland as estimated to the 30th June 1899, is 4,390,448, the males numbering 2,130,938, the females 2,259,510.

This population as shown in Table II. is, as is usually done, primarily distributed into five groups of Registration Districts. In the Principal Town Districts the gross population is 1,801,122, the males being 862,469, the females 938,653; in the Large Town Districts the total is 578,705—males 284,585, females 294,120; in the Small Town Districts both sexes amount to 928,959, the males being 452,501, the females 476,458; in the Mainland Rural Districts they are 960,676—males 474,100, females 486,576; and in the Insular Rural Districts the total population is 120,986, the males numbering 57,283, the females 63,703.

By means of the recent census numbers some of the Tables have been

TABLE IV.—Percentage of Births, Deaths, and Marriages in the Five Groups of Districts of Scotland, to the Population during each of the Years 1855–1899.

recalculated backwards from the numbers of 1901 and 1891, in place of forwards from those of 1881 and 1891, and no doubt are more correct than was the case at least during the later years of the past decennium.

BIRTHS.

130,733 births were registered throughout Scotland during 1899, a smaller number by 128 than for the previous year, and giving a birth-rate of 2·98 per cent., or 298 births in every ten thousand of the population, and which is the lowest rate as yet recorded since the commencement of these reports. The mean birth-rate for the last ten years is 3·03 per cent.

The male births during the year number 66,778, and the female 63,955. The births are in excess of the deaths by 51,140.

The number of illegitimate births is 8486, and constitute 6·49 per cent. of the total registered births—the lowest rate that has yet been noted in these reports. The male illegitimates are 4272, the female 4214.

Tables VIII. and IX. indicate how the births are distributed in each of the five primary Registration Districts:—In the Principal Town Districts they total to 56,590,—of those 28,876 being males and 27,714 females, together giving a birth-rate of 3·142 per cent.; in the Large Town Districts they are 18,419,—males 9447, females 8972, and constitute a birth-rate of 3·183 per cent.; in the Small Town Districts they are 28,178,—males 14,290, females 13,888, giving a birth-rate of 3·033 per cent.; in the Mainland Rural Districts they number 24,943,—males 12,826, females 12,117, with a birth-rate of 2·596 per cent.; and in the Insular Rural Districts they are 2,603,—the males 1339, the females 1264, together giving a birth-rate of 2·151 per cent. to the population of the same.

As regards the illegitimate births alone, these Tables also show how they are registered in the various districts. In the Principal Town Districts they number 3499,—males 1752, females 1747,—and form 6·18 per cent. of the total births in the same; in the Large Town Districts they are 929, —males 463, females 466,—and form 5·04 per cent. of all; in the Small Town Districts they are 1697,—males 851, females 846,—and form 6·02

TABLE V.—Number of Births, Deaths, and Marriages in the Principal Towns of Scotland during 1899, and their Proportion to the Estimated Population; also the Illegitimate Births, and their Proportion to the Total Births.

of wedlock in Scotland during the year; in the Principal Town Districts it was 1 in every 16; in the Large Town Districts 1 in every 20; in the Small Town Districts 1 in every 17; in the Mainland Rural Districts 1 in every 11; and in the Insular Rural Districts it was 1 in every 18.

Table V. gives similar information regarding the Principal Towns in Scotland. Thus the highest birth-rate occurred in Coatbridge—3·665 per cent., followed by Govan and Partick with one of 3·602 per cent., Glasgow with one of 3·267 per cent., Paisley with one of 3·199 per cent., Aberdeen with one of 3·185 per cent., Leith and Kilmarnock each with one of 3·165 per cent., Greenock with one of 3·101 per cent., Dundee with one of 2·982 per cent,, Edinburgh with one of 2·690 per cent., and Perth with one of 2·650 per cent. As regards the illegitimate births in the same towns 8·16 per cent. of the total births in Dundee were of this character, 7·42 per cent.

TABLE VII.—Births in Scotland, 1855–1899; with the Proportion of Males to Females in the Legitimate, Illegitimate, and Total Births; also the Number of Twin and Triplet Births during each year; and the Proportion of Mothers who had Multiple Births.

n Aberdeen, 6·82 per cent. in Edinburgh, 6·77 per cent. in Perth, 6·48 per ent. in Glasgow, 4·79 per cent. in Greenock, 4·58 per cent. in Kilmarnock, 4·55 per cent. in Paisley, 4·13 per cent. in Leith, 3·70 per cent. in Govan and Partick, and 3·44 per cent. in Coatbridge.

Table VI. shows the illegitimate birth-rate in the divisions and counties of Scotland. In the latter the highest rate falls to Wigtown, where 14·69 per cent. of all were of this nature; the lowest rate, 2·95 per cent., occurred in Dumbarton. The counties in which the highest rate is found on this occasion are—Dumfries with 11·02 per cent.; Caithness with 11·15 per cent.; Aberdeen with 11·29 per cent.; Kirkcudbright with 11·95 per cent.; Elgin with 12·77 per cent.; Banff with 13·57 per cent.; and Wigtown with 14·69 per cent. In eighteen counties the rate is under that for Scotland, which is 6·49 per cent. The lowest rate occurs in Renfrew, 4·14 per cent.; Clackmannan 3·31 per cent.; Shetland 3·01 per cent.; and Dumbarton 2·95 per cent.

Of the total births registered throughout Scotland during the year 66,778 are of the male sex and 63,955 of the female, so that there were 2823 more of the former born than of the latter. The proportion of males born to females is as 104·4 is to 100. Among the legitimate births alone it is as 104·6 is to 100, and among the illegitimate as 101·4 is to 100.

During the year 1463 mothers bore twins and in 15 cases triplets, so that of the total mothers bearing children—129,240 in all—one in every 87 bore two at a birth, and one in every 8616 bore three.

TABLE VIII.—Births, 1899. Number of Legitimate, Illegitimate, and Total Births in Scotland, and its Five Groups of Districts, distinguishing the Sexes. Also the number of Twin and Triplet Births.

Scotland . .	2·978	6·49	104·4	104·6	101·4	88·3	8616

The births were registered throughout Scotland month by month as follows:—9·49 per cent. of them during May, 8·69 per cent. during June, 8·62 per cent. during October, 8·59 per cent. during April, 8·57 per cent. during July, 8·46 per cent. during August, 8·34 per cent. during March, 8·18 per cent. during September, 8·15 per cent. during January, 7·89 per cent. during November, 7·85 per cent. during December, and 7·17 per cent. during February.

The birth-rate for each ten thousand of the population as estimated for the present year in the following European States is—390 in Hungary, 371 in Austria, 364 in Prussia, 359 in German Empire, 342 in Italy, 320 in the Netherlands, 309 in Norway, 301 in Denmark, 289 in Switzerland, 288 in Belgium, 262 in Sweden, and 219 in France.

MARRIAGES.

During 1899 the number of marriages registered in Scotland was 32,978, giving a marriage rate of 75·11 in every ten thousand of the population, and which is the highest rate as yet reported. The mean average rate for the last ten years (1889-1898) is 70 per ten thousand.

Table VI. gives an indication as to the varying rate of marriage in the districts and counties into which Scotland is divided. As to the former, the rate in the Principal Town Districts is equivalent to 93·49 per ten thousand of the population of the same; in the Large Town Districts it is 76·29 in like proportion; in the Small Town Districts it is 67·79; in the Mainland Rural Districts it is 51·48; and in the Insular Rural Districts 39·76 per ten thousand.

In the counties the rate also greatly varies, attaining its maximum of 89·69 per ten thousand of the inhabitants of Edinburgh, the minimum of 38·37 being in Argyll. In four counties the marriage rate is above that for Scotland, which is 75·11 per ten thousand, viz.:—76·02 in Aberdeen; 76·38 in Forfar; 89·48 in Lanark; and 89·67 in Edinburgh. The rate is at its lowest in Orkney, 56·54; in Ross and Cromarty, 45·55; in Shetland, 45·26; in Sutherland, 41·64; and in Argyll, 38·37.

Table V. gives the number of marriages and the proportion corresponding thereto in each of the Principal Towns of Scotland, the latter being in

TABLE X.—Marriages, 1899. Number of Marriages contracted in Scotland and its Five Groups of Districts according to the Rites of the several Religious Denominations, and their Proportion to the Total Marriages in each Group.

Glasgow a rate of 100 in each ten thousand of the population; in Edinburgh of 99, in Dundee of 85, in Aberdeen of 96, in Govan and Partick of 68, in Leith of 81, in Paisley of 80, in Greenock of 82, in Coatbridge of 83, in Perth of 97, and in Kilmarnock of 94.

The fertility of each marriage is computed as usual—the legitimate births of the year under review being divided by the marriages of a former year—on this occasion 1893; so that $\frac{1}{2}\frac{2}{7}\frac{2}{1}\frac{2}{4}\frac{4}{5}\frac{7}{.}$ gives 4·50 as the average fertility of each marriage, or 450 children were presumably born to every 100 marriages.

From Tables X., XI., and XII. information may be obtained regarding the number and proportion of marriages as performed in Scotland and

---

Table Xa.—Marriages, 1899. Number of Marriages contracted in Scotland and each of the Counties and Principal Towns according to the Rites of the Several Religious Denominations, and their Proportions to the Total Marriages in each.

		Population estimated to middle of 1899.	Marriages according to each Denomination.									Percentage to Total.

over of the marriage ceremonies were performed under the auspices of the Established Church, the highest rates being 60·00 per cent. in Kinross, 60·40 per cent. in Linlithgow, 60·81 per cent. in Peebles, 62·78 per cent. in Clackmannan, 65·29 per cent. in Dumfries, 68·00 per cent. in Wigtown, 69·56 per cent. in Haddington, 72·64 per cent. in Kincardine, 72·66 per cent. in Shetland, and 75·78 per cent. in Kirkcudbright; the lowest being 34·61 per cent. in Lanark, 25·56 per cent. in Sutherland, and 16·86 per cent. in Ross and Cromarty. In two counties 50·00 per cent. or over of the marriage ceremonies were solemnized by ministers of the Free Church, 71·11 per cent. in Sutherland, and 76·29 per cent. in Ross and Cromarty; they are lowest in Clackmannan, 11·67 per cent., Shetland, 9·37 per cent., and Kirkcudbright, 8·52 per cent. Marriages in connection with the United Presbyterian Church occur in largest ratio in Berwick, where 21·11 per cent. of all fall under this demonination, Kinross with 25·00 per cent., Selkirk with 27·50 per cent., and Orkney with 31·10 per cent.; they are least in evidence in Argyll, 2·93 per cent., Caithness, 2·38 per cent., Ross and Cromarty, 1·71 per cent., and Inverness, 0·71 per cent; there being none in Sutherland. The counties in which Roman Catholic marriages bulk most largely are Lanark, where 16·98 per cent. of all pertain to this Church, Renfrew with 19·43 per cent., and Dumbarton, with 20·15 per cent.; least so in Aberdeen, with 1·22 per cent., Elgin, with 1·09 per cent., Shetland, with 0·78 per cent., and Berwick, 0·56 per cent. There are none in Orkney, Caithness, Sutherland, Ross and Cromarty, Kincardine, and Kinross. Episcopal Church marriages are proportionately most frequent in Kincardine, where 5·97 per cent. of all are so headed, in Edinburgh 6·09 per cent., and in Forfar 6·85 per cent.; least so in Shetland, 0·78 per cent.; Orkney, 0·61 per cent.; Caithness, 0·59 per cent.; Wigtown, 0·57 per

cent; and Kirkcudbright, 0·45 per cent.; there being none in Sutherland, Kinross, Bute, and Peebles. Marriages as performed by clergy of other denominations bulk most largely in Aberdeen, with 8·48 per cent. of all, Forfar with 8·56 per cent., Nairn with 8·77 per cent., Lanark with 9·99 per per cent., and Caithness with 11·31 per cent.; least so in Haddington with 1·93 per cent., Kincardine with 0·99 per cent., and Kirkcudbright with 0·90 per cent.; there being none in Kinross or Peebles. Irregular marriages are in greatest proportion in Forfar 3·28 per cent., Aberdeen 3·59 per cent., Lanark 8·95 per cent., and Edinburgh 11·61 per cent.; least so in Ross and Cromarty and in Wigtown each 0·57 per cent., Berwick 0·56 per cent., and Kincardine 0·50 per cent., there being none in thirteen counties.

In the lower portion of Table X*a*. similar information may be obtained as to the Principal Towns in Scotland, thus it is there seen that in Leith, Perth, and Kilmarnock over 50·00 per cent. of the marriage ceremonies were solemnised by clergymen of the Established Church; the lower rates falling in Govan and Partick, 32·08 per cent.; Paisley, 31·50 per cent.;

of other denominations than the foregoing occur mostly in Aberdeen, 10·26 per cent.; Glasgow, 10·69 per cent.; Govan and Partick, 10·81 per cent.; and Dundee, 11·26 per cent.: being lowest in Edinburgh, 4·80 per cent.; and Leith, 3·90 per cent. Irregular marriages show their highest rate in Glasgow, 12·41 per cent., and in Edinburgh, 16·02 per cent.; their lowest in Leith, 1·62 per cent., and Paisley, 0·65 per cent.

In Table XIII. there is given a series of ages at which all those who entered into the state of matrimony during the year did so, with the exception of three of each sex, who omitted to give this information. Of the total celebrations 2,009, or 6·1 per cent. of the husbands, and 6,019, or 18·2 of the wives, were under 21 years of age on the occasion. Five of the brides were between 15 and 16 years of age at marriage, and seventy-eight between 16 and 17 years, while two of the bridegrooms were between 16 and 17 and twenty-six between 17 and 18 years of age. Twenty-two of

Table XIV. shows the proportion of the men and women at different ages who contracted marriage in Scotland and in each of the five groups of districts during 1899. Thus in Scotland 2·50 in every hundred marriages among males occurred between the age of 15 and 20 years, 10·43 being the corresponding ratio among the females; these proportions are exceeded in the case of both sexes in the Principal Town Districts, and as to the females alone in the Large Town and Small Town Districts. Between 20-25 years, 34·53 per cent. of the marriages among the males, and 44·84 per cent. among the females occurred throughout Scotland, ratios exceeded by both sexes in the Large and Small Town Districts. Between 25-30 years, 33·86 per cent. of the men and 26·19 per cent. of the women married, exceeded in the case of both sexes in the Mainland Rural Districts, by that of the males alone in the Small Town Districts, and by that of the females in the Insular Rural Districts. Between 30-35 years, 14·24 per cent. of the males married, and 9·69 per cent. of the females, exceeded by both sexes in the Principal Town Districts and both Rural. Between 35-40 years, 6·83 per cent. of the males and 4·65 per cent. of the females married, ratios exceeded as to both sexes in the two Rural Districts. Between 40-50 years, 5·34 per cent. of the men and 3·35 per cent. of the women married, proportions exceeded as to both sexes in the Principal Town and Insular Rural Districts. At 50 years and over, 2·69 in every 100 marriages among the males occurred in Scotland, 0·84 being the corresponding proportion among the females.

During the year 29,198 bachelors married spinsters, 863 bachelors espoused widows, 2097 widowers united with spinsters, and 814 widowers with widows; or 88·54 per cent. of the marriages were between bachelors and spinsters, 2·62 per cent. between bachelors and widows, 6·36 per cent. between widowers and spinsters, and 2·47 per cent. between widowers and widows.

Table XVIII. shows the proportion of men and of women married during the year who signed their names to the register of the same, or who, not presumably able to write, simply appended their *mark* in lieu thereof, and which may be taken as an indication as to how far at least primary education stands in Scotland. During the year 98·09 per cent. of the husbands and 97·17 per cent. of the wives signed their names, leaving 1·91 per cent. of the former and 2·83 per cent. of the latter as unable to do so. When compared with the like proportions ten years ago great improvement is seen to have occurred, for in 1889 there signed 95·70 per cent. of the husbands and 92·62 per cent. of the wives, while 4·30 per cent. of the former and 7·38 per cent. of the latter made use of *mark*. The above proportions vary considerably in the different districts; in the Principal Town Districts 1·89 per cent. of the men and 3·28 per cent. of the women did not sign their names; in the Large Town Districts 2·24 per cent. and 2·29 per cent. respectively did likewise; in the Small Town Districts the ratios are 2·11 per cent. and 2·22 per cent.; in the Mainland-Rural Districts 0·89 per cent. and 1·25 per cent.; and in the Insular-Rural Districts they are 7·07 per cent. and 16·08 per cent.

In eleven counties a larger proportion of the husbands appended their *mark* than is the case for all Scotland, and in six counties the wives did the same, in most cases the failing occurring in the same county with both sexes, these latter being Caithness, Sutherland, Ross and Cromarty, Inverness, Argyll, and Lanark, the males failing over and above in Nairn, Dumbarton, Linlithgow, Peebles, and Wigtown. In Orkney and Kinross all of

both sexes signed, all the males in Kincardine, Clackmannan, and Selkirk, and all the females in Bute, Berwick, and Peebles doing likewise.

At the foot of the Table similar information is given for Edinburgh and Glasgow. In the former city 99·31 per cent. of the men married during the year wrote their names, 98·98 per cent. of the women doing the same, leaving 0·69 per cent. of the former and 1·02 per cent. of the latter who made use of their *mark;* in Glasgow the corresponding ratios are 97·28 per cent. of the husbands and 95·17 per cent. of the wives writing, leaving 2·72 per cent. and 4·83 per cent. respectively apparently unable to do so.

15·02 per cent. of the marriages throughout Scotland were registered during June, 13·34 per cent. during December, 12·81 per cent. during July, 12·27 per cent. during January, 7·42 per cent. during April, 6·63 per cent. during October, 6·47 per cent. during November, 6·33 per cent. during September, 6·25 per cent. during August, 4·97 per cent. during February, 4·77 per cent. during March, and 3·72 per cent. during May.

The marriage rate per ten thousand of the estimated population in the undernoted European States during 1899 is as follow:—62 in Sweden, 71 in Norway, 74 in the Netherlands and in Italy, 76 in France, 78 in Switzerland, 82 in Austria and in Belgium, 85 in the German Empire and in Prussia, and 89 in Hungary.

DEATHS.

79,593 deaths were registered as occurring in Scotland during 1899, which gives a mortality rate of 181 in every ten thousand of the population as estimated, or one death in every 55 of the inhabitants. 33,903 of those are males and 39,690 females. The mortality rate among the males alone for the present year is 187, and among the females 176 per ten thousand of the sexes respectively. The mean death-rate for the last ten years is 186 per ten thousand of the population.

Tables XIX. and XX. give the number of deaths for each sex, and the corresponding mortality rates in each of the five primary Registration Districts. From the former Table, the number of deaths altogether registered in the Principal Town Districts is 35,870, the rate being 199 in every ten thousand of the inhabitants of the same; the male deaths number 18,130, and the female 17,740; in the Large Town Districts the total deaths are 10,746, equal to 189 in each ten thousand of the inhabitants; the male deaths are 5,508, and the female 5,238; in the Small Town Districts the total is 15,762, the equivalent rate being 170 per ten thousand of the population; the male deaths are 7,697, the female 8,065; in the Mainland Rural Districts the deaths are 15,313, the rate 159 per ten thousand of the population; the males 7,701, the females, 7,612; and in the Insular-Rural Districts the deaths amounted to 1,902, giving a rate of 157 in each ten thousand of the population of the same—the males 867, the females 1035. The total Urban and Rural rates being compared, show the rate per ten thousand in the former to be 189, while in the latter it is 159. The death-rate in the case of both sexes is, in the Principal Town Districts and Large Town Districts higher than the same for Scotland, and in the Insular-Rural Districts the female mortality rate is higher than that for the males.

Tables XXI. and XXII. afford similar information as to the Principal Towns in Scotland. Glasgow shows a total of 15,827 registered deaths during 1899, being at the rate of 21·3 per thousand of its population as

estimated; in Edinburgh the deaths number 5,858, giving a rate of 19·2 per thousand; Dundee indicates a total of 3,190, with a mortality rate of 19·9 per thousand; Aberdeen shows a total of 2,719 deaths, the rate corresponding being 18·4 per thousand; in Govan and Partick 2,040 deaths are registered, at the rate of 16·4 per thousand; in Leith they total to 1,411, or 18·6 per thousand; in Paisley they are 1,509, or 19·6 per thousand; in Greenock they are 1,321, with a rate of 19·6 per thousand; in Coatbridge they are 761 and 21·3 respectively; in Perth they are 595 and 18·4; and in Kilmarnock the deaths registered are 639, giving a mortality rate of 19·3 per thousand of the population.

Tables XXIII. and XXIV. are prepared to show the number of deaths at a series of ages, and the percentage of the same to the numbers presumably alive at the like ages in Scotland, and in each of its five primary Registration Districts. Thus, of children under one year of age, 15·937 per cent. of the males and 13·178 per cent. of the females died throughout Scotland

during the year, rates exceeded in the case of both sexes in the Principal and Large Town Districts. In the other districts the rates are under those for Scotland, being lowest in the Insular Rural Districts, with a male mortality rate of 8·736 per cent., and a female of 5·303 per cent. In each district the male rate at this early age is higher than the female.

Under two years of age, the death-rate in Scotland in the case of the males is 5·101 per cent., and of the females, 5·008 per cent.; ratios exceeded in the case of both sexes in the Principal Town Districts, and of the females in the Large Town Districts. The lowest rates fall in the Insular Rural Districts, 1·727 per cent. and 1·943 per cent. respectively. The female rate is higher than that of the male in the Large Town Districts and Insular Rural Districts.

Under three years of age the death-rate among males in Scotland is 1·819 per cent., and among females 1·970 per cent., proportions exceeded

---

and that as to both sexes in the Principal Town Districts, and as to males in the Large Town Districts. The lowest rate occurs in the Insular Rural Districts, 0·640 ; and in Scotland, in the Principal and Small Town Districts, and in both Rural the female rate is above that of the male.

Under four years of age the male death-rate for the country is 1·077 per cent. and the female, 1·126 per cent., exceeded in the case of both in the Principal and Large Town Districts. In each case, except in the Mainland Rural Districts, the female rate is higher than the male.

Under five years of age the rate for the respective sexes in Scotland is 0·750 per cent. and 0·727 per cent., exceeded in the case of both in the Principal Town Districts, of the males alone in the Large Town Districts, and of the females in the Small Town Districts. In the Principal and Small Town Districts, the female rate is higher than the male.

At all ages under five years the male mortality rate is 5·121 per cent. and the female 4·533 per cent. of all presumably alive at that age in Scotland. Between 5-10 years the rates are 0·411 per cent. and 0·434 per cent. for the respective sexes ; and during the next five year period, 10-15 years, the death rate is at its minimum, that for the males in Scotland being 0·270 per cent. and for the females 0·310 per cent. These rates are somewhat exceeded as to both sexes in the Principal Town Districts, in the case of

the males in the Large Town Districts, and of the females in the Small Town and Insular-Rural Districts, and in all cases except the Principal Town Districts the female rate is higher than the male. Between 15-20 years the death rate for Scotland rises in the case of the males to 0·427 per cent., and of the females to 0·467 per cent., exceeded as to the former sex in the Principal Town Districts and Mainland-Rural Districts, and as to the latter in the Large Town and Small Town Districts, and in Scotland, in the Large Town, Small Town, and Insular-Rural Districts the female rate is higher than the male. Between 20-30 years the male rate for the whole country is 0·739 per cent., and the female 0·660 per cent., ratios exceeded in the case of both sexes in the Large Town Districts, of the males in the Principal Town and Insular-Rural Districts, and of the females in the Mainland-Rural Districts. At ages over 30 the mortality rate rises steadily, and generally more markedly so in the Urban than in the Rural Districts, and as a rule that among the males is higher than is the case with the opposite sex. The male death-rate at all ages for Scotland is 187 per ten thousand of the same sex, the female is 176. In the Principal Town Districts, the male rate is 210 per ten thousand, the female, 189; in the Large Town Districts they are 194 and 178 respectively; in the Small Town Districts they are 170 and 169; in the Mainland-Rural Districts they are 162 and 156; and in the Insular-Rural Districts the male mortality rate is 151 per ten thousand of population as estimated, the female, 163 in like proportion.

Table XXVI. gives the number of deaths at the same stated ages in each of the Principal Towns in Scotland, and Table XXVII. the proportions of the same to those presumably alive at like ages. Thus, at ages under one year, the greatest mortality occurs in Dundee, where, in every hundred infants alive at that age, 19·46 died; followed by Leith with 17·73, Edinburgh with 17·65, Glasgow with 17·29, Aberdeen with 17·13, Coatbridge with 16·04, Greenock with 15·91, Kilmarnock with 15·72, Govan and Partick

noted European States during the year is as follows:—270 in Hungary 254 in Austria, 221 in Italy, 215 in the German Empire, 211 in France 188 in Belgium, 176 in Sweden and in Switzerland, 175 in Denmark, 171 in the Netherlands, 168 in Norway.

CAUSES OF DEATH.

Of the 79,593 deaths registered in Scotland during the year, 684 were specified in such a manner or so ill-defined as to be of no use for statistical purposes.

The death-rate for Scotland, the sexes combined, is, for the year now being considered, 1813 in every hundred thousand of the inhabitants as estimated, the male rate being 1873 and the female 1757.

The deaths registered from Zymotic diseases in all Scotland during 1899 are in all 10,736, being in the proportion of 247 in every hundred thousand of the population, and constituting 13·61 per cent. of the total mortality. The incidence of those diseases is most marked in the Principal and Large Town Districts, least so in the Mainland-Rural Districts. (Tables XXVIII. and XXIX.)

Table XXXII. shows the number and proportion of deaths at five periods of life from the chief Zymotics and from ordinary causes. Thus, of the whole 10,736 such deaths, 6805 occurred during the first five years of life, 590 between the ages of 5-10 years, 188 between 10-15 years, 1906 between 15-60 years, and 1247 at greater ages: the corresponding proportions of those being 63·4 per cent. during the early period, 5·5 per cent. during the next quinquennial period, 1·8 per cent. between 10-15 years, 17·7 per cent. between 15-60 years, and 11·6 per cent. at ages over 60 years, so that of the whole 70·7 per cent. occurred during the first 15 years of life. Table XXXIII. shows that of the total deaths at ages up to 15 years 25·18 per cent. are due to Zymotics, 6·37 being the percentage at ages above 15 years.

Small-pox caused but a single death in Scotland during 1899. To Measles 1599 deaths are ascribed, 1481 or 92·6 per cent. occurring during the first five years of life, 77 or 4·8 per cent. between 5-10 years, and 41 or 2·6 per cent. at a greater age. Scarlet Fever is the cause of 831 deaths, of which 534 or 64·3 per cent. happened under the age of five years, 175 or 21·1 per cent. during the following quinquennium, 48 or 5·8 per cent. between 10-15 years, 73 or 8·7 per cent. between 15-60 years, and 1 death was registered at an age above 60 years. Hooping-Cough accounts for 1894 exits during the year, 1832 or 96·7 per cent. of them during the first five years of life, and 58 or 3·1 per cent. during the next age period. From Influenza there were 1454 deaths, 137 or 9·4 per cent. during the early age, 32 or 2·2 per cent. between 5-15 years, 524 or 36·1 per cent. between 15-60 years, and 761 or 52·3 per cent. at ages over 60 years. To Diphtheria 697 deaths are allocated, 519 or 74·5 per cent. between 0-5 years, 135 or 19·4 per cent. between 5-10 years, 19 or 2·7 per cent. between 10-15 years, 23 or 3·3 per cent. between 15-60 years, and one at a greater age. Fevers caused 851 deaths, 40 or 4·7 per cent. at the early age, 70 or 8·2 per cent. between 5-10 years, 74 or 8·7 per cent. between 10-15 years, 637 or 74·9 per cent. between 15-60 years, and 30 or 3·5 per cent. at a greater age. Of those, Typhus caused 29 deaths, 26 of them at ages between 15-60 years; Enteric or Typhoid caused 803 deaths, 33 or 4·1 per cent. during the first five years of life, 67 or 8·3 per cent. between 5-10 years, 71 or 8·8 per cent.

between 10-15 years, 606 or 75·5 per cent. between 15-60 years, and 26 or 3·3 per cent. at a greater age. Cerebro-Spinal Fever is the cause of 4 deaths, and Simple or Ill-defined of 15. Diarrhœa and Dysentery caused 2474 deaths, 1896 or 76·6 per cent. between 0-5 years, 32 or 1·3 per cent. between 5-10 years, 6 or 0·2 per cent. between 10-15 years, 188 or 7·6 per cent. between 15-60 years, and 352 or 14·3 per cent. at ages over 60. Syphilis caused 202 deaths, 167 or 82·7 per cent. during the first term of life. Erysipelas caused 174 deaths, 51 or 29·4 per cent. during 0-5 years, 7 or 4·0 per cent. between 5-15 years, 58 or 33·3 per cent. between 15-60 years, as also the same at a greater age. Puerperal Fever caused 214 deaths, all naturally between the age of 15-60 years. Among other diseases Croup caused 159 deaths, 139 or 87·4 per cent. between birth and the fifth year, 19 or 12·0 per cent. during the following quinquennial period, a single death being registered from it between 15-60 years.

Out of every hundred thousand of the population of Scotland 247 are estimated to have succumbed to diseases of a Zymotic character, and equal to 13·61 per cent. of the total specified mortality. In the Principal Town Districts 293 per hundred thousand of the estimated population of the same died from Zymotics, equivalent to 14·73 per cent. of the total deaths in those districts; in the Large Town Districts the rates are 258 to population and 13·92 per cent. of all the deaths; in the Small Town Districts they are 233 and 13·72 per cent. respectively; in the Mainland-Rural Districts 171 and 10·74 per cent.; and in the Insular-Rural Districts they are 195 per hundred thousand of population and 12·43 per cent. of the total mortality.

Table XXX. gives the proportion of deaths from various diseases to the population in each of the Principal Towns in Scotland, and Table XXXI. the proportion of deaths from the same diseases to the total deaths in each. Thus in Glasgow Zymotics are the cause of 317 deaths in every hundred thousand of the estimated population, and equal to 14·88 per cent. of the total specified deaths in the same. Diarrhœa and Dysentery account for 77 of the former, Measles for 75, Hooping Cough for 44, Scarlet Fever for 27, Fevers for 25 (24 of those being Enteric), Influenza for 22, and Diphtheria for 15.

In Edinburgh 258 deaths per hundred thousand of its inhabitants occurred from Zymotics, equal to 13·47 per cent. of all deaths. Hooping Cough is the cause for 66 of the former, Diarrhœal Affections for 60, Influenza for 34, Measles for 27, Scarlet Fever and Fevers each for 17 (14 of the latter are Enteric and 2 Typhus), and Diphtheria for 16.

In Dundee the proportion is 258 to population, being 12·93 per cent. of all the specified deaths. Diarrhœa and Dysentery is accountable for 97 of the former, Hooping Cough for 51, Measles for 29, Diphtheria for 23, Fevers for 16 (3 Typhus, 13 Enteric or Typhoid), and Scarlet Fever and Influenza each for 9.

In Aberdeen the proportion of Zymotic deaths to population as above is 292, or 15·89 per cent. of all the deaths. Measles accounts for 91 of this proportion, Diarrhœa and Dysentery for 51, Hooping Cough for 34, Influenza for 33, Diphtheria for 21, Fevers for 16 (15 being Enteric), and Scarlet Fever for 12.

In Govan and Partick 218 in every hundred thousand of the inhabitants succumbed to Zymotics, or 13·30 per cent. of the total deaths were of this nature. 69 of the former ratios are due to Measles, 60 to Diarrhœal Affections, 28 to Hooping Cough, 22 to Influenza, 11 to Diphtheria, 6 to Fevers (all Enteric), and 5 to Scarlet Fever.

In Leith the proportion is 296 to population as before, or 15·91 per cent. of all deaths. Of the former 132 is due to Hooping Cough, 66 to Diarrhœa

thousand of population, or 16·91 per cent. of all deaths. 129 of this is due to Diarrhœa and Dysentery, 115 to Measles, 30 to Scarlet Fever, 18 to Diphtheria, 13 to Fevers (all Enteric), and 7 each to Influenza and Hooping Cough.

In Coatbridge the rate to population from Zymotics is 401, equal to 18·78 per cent of the total deaths. Of the former 127 is due to Hooping Cough, 88 to Measles, 62 to Diarrhœal Affections, 31 to Diphtheria, 28 to Fevers (all Enteric or Typhoid), and 17 to Scarlet Fever and to Influenza.

In Perth 255 persons per hundred thousand died from Zymotics, or 13·87 per cent. of all deaths were of this nature. 68 of this is due to Diarrhœa and Dysentery, 53 to Hooping Cough, 34 to Scarlet Fever, 25 to Measles, 22 to Influenza, 19 to Diphtheria, and 16 to Fevers (all Enteric).

In Kilmarnock the mortality-rate from Zymotics is 372 to the population, and equal to 19·24 per cent. of all deaths in the town. Diarrhœal Affections account for 64 of this, Influenza and Fevers each for 58 (all the latter Enteric), Scarlet Fever for 55, Hooping Cough for 46, Measles for 30, and Diphtheria for 24.

A single death from Small-pox is registered in Scotland during the year, and that was in Glasgow, in the person of an engineer, *aet.* 39 years, during the month of June.

Measles caused 1599 deaths in Scotland during 1899, being at the rate of 37 in every hundred thousand of the population, and forming 2·03 per cent. of the total specified deaths; of those 839 were males and 760 females. The Principal Town Districts suffered most, as here 59 deaths in every hundred thousand of the population were so caused. The Mainland-Rural Districts show the lowest proportion—16.

Scarlet Fever is the ascribed cause of 831 deaths, affording a mortality-rate of 19 per hundred thousand of population, or 1·05 per cent. of all deaths—males 381, females 450. The Principal and Large Town Districts show the heaviest mortality from this, viz., 21 in the former and 26 in the latter, the rate in the Insular-Rural Districts being but 5 in like proportion.

From Influenza 1454 deaths are registered, being at the rate of 33 in every hundred thousand of population, and forming 1·84 per cent. of all specified deaths; males 625, females 829. The two Rural Districts evidently suffered in proportion most severely, the rate in the Mainland-

Rural being 44, and in the Insular-Rural Districts 117 per hundred thousand of their respective populations.

Hooping Cough caused 1894 deaths, giving a mortality-rate of 44 per hundred thousand, and equal to 2·40 per cent. of all the deaths—males 847, females 1047. The highest rates occur in the three Urban Districts, being 51 in the Principal Town Districts, 50 in the Large Town Districts, and 48 in the Small Town Districts.

From Diptheria 697 deaths are returned, equal to 16 deaths per hundred thousand of the inhabitants, and 0·88 per cent. of all deaths—males 349, females 348. The Large Town Districts indicate the heaviest death-rate from Diptheria 21, the lowest 4, occurring in the Insular-Rural Districts.

Continued Fevers caused 851 deaths, a mortality-rate of 20 in every hundred thousand of population, and equal to 1·08 per cent. of all deaths—males 490, females 361. The rate for fevers is somewhat higher in each of the three Urban Districts than for Scotland, the rate in the Mainland-Rural Districts being 14, and in the Insular-Rural Districts 12. Typhus Fever caused 29 deaths throughout Scotland; Enteric or Typhoid caused 803 (males 468, females 335), together giving a rate of 18 per hundred thousand of population. Cerebro-Spinal Fever caused 4 deaths, Simple or Ill-defined 15. Table XXXVII. shows that 134 of the Typhoid deaths were registered in the Rural Districts, forming 91·78 per cent. of the total fever mortality in the same, while 669 of them occurred in the Urban Districts, equal to 94·89 per cent. of the fever mortality therein. Typhus caused 21 deaths in the Urban Districts, and 8 in the Rural.

Diarrhœa and Dysentery caused 2474 deaths throughout Scotland, giving a mortality-rate of 57 per hundred thousand of population, and equal to 3·14 per cent. of all deaths—males 1238, females 1236. Much the highest mortality from these occurred in the Principal and Large Town Districts;

74 and 67 respectively, the lowest rate, 13 per hundred thousand of the inhabitants falling to the Insular-Rural Districts.

To Cancer 3572 deaths are ascribed, being at the rate of 82 per hundred thousand of population (the male rate is 67, the female 97), and together equal to 4·53 per cent. of the total deaths—males 1405, females 2167. The highest rate occurs in the Mainland-Rural Districts 91, in the Principal Town Districts it is 86, in the Large Town Districts it is 72, in the Small Town Districts it is 74, and in the Insular-Rural Districts it is 70. From Tables XXX. and XXXI., which refer to the Principal Towns, it is seen the highest mortality-rate from Cancer falls in Dundee, 116 per hundred thousand of its inhabitants, followed by Edinburgh with 107 in like ratio, Aberdeen with 96, Glasgow with 83, Perth with 81, Leith with 79, Coatbridge with 68, Kilmarnock with 61, Paisley with 57, Greenock with 52, and Govan and Partick with 50.

Diseases of a Tubercular nature caused 10,497 deaths, equal to 241 in every hundred thousand of population, and forming 13·30 per cent. of the total specified deaths—males 5354, females 5143. The rates in the Principal and Large Town Districts are over that for Scotland, being 275 in the former, and 259 in the latter; in the Small Town Districts the rate is 219, in the Mainland-Rural Districts 194, and in the Insular-Rural Districts 192 to population as above. The percentage-rate to the total deaths is 13·81 in the Principal Town Districts, 13·97 in the Large Town Districts, 12·89 in the Small Town Districts, 12·18 in the Mainland-Rural Districts, and 12·21 in the Insular-Rural Districts. Phthisis claims by far the largest number of such deaths, 7275 in all, males 3679, females 3596, together equal to 167 per hundred thousand of the inhabitants, and forming 9·22 per cent. of the total mortality in Scotland. The death-rate from Consumption in each of the five primary Registration Districts is 187 to the population as before in the Principal Town Districts, 178 in the Large Town Districts, 151 in the Small Town Districts, 140 in the Mainland-Rural Districts, and 149 in the Insular-Rural Districts. Of the males who succumbed to this disease, 7·7 per cent. were under 15 years of age, 69·3 per cent. between 15-45 years of age, and 23·0 per cent. at greater ages, the ratios at the corresponding ages among the females are 11·6 per cent. 72·4 per cent., and 16·0 per cent. In the Principal Towns, Phthisis took toll from every hundred thousand of the inhabitants as follows:—198 in Glasgow, 191 in Edinburgh, 199 in Dundee, 167 in Aberdeen, 136 in Govan and Partick, 202 in Leith, 175 in Paisley, 172 in Greenock, 155 in Coatbridge, 199 in Perth, and 207 in Kilmarnock. Tabes Mesenterica caused 1010 deaths in Scotland, males 517, females 493; Tubercular Meningitis caused 1300 deaths, males 672, females 628; and Scrofula 912, males 486, females 426.

Diseases of the Brain and Nervous System account for 9266 exits, equivalent to 213 per hundred thousand of population, and forming 11·74 per cent. of all deaths—males 4552, females 4714. The mortality-rate to the population from such diseases is in the Principal and Large Town Districts higher than that for Scotland, being 225 in both, in the Small Town Districts it is 203, in the Mainland-Rural Districts it is 199, and in the Insular-Rural Districts it is 164. Among the Principal Towns the highest rate is in Paisley 272, followed by Greenock with one of 265, Coatbridge with one of 251, Kilmarnock with one of 241, Perth with one of 237, Dundee with one of 230, Glasgow with one of 224, Aberdeen with one of 216, Edinburgh with one of 215, and Govan and Partick and Leith each with one of 204. Of the more important Nervous diseases Apoplexy caused 3533 deaths—males 1521, females 2012; Paralysis 1557—males

764, females 793; Epilepsy 238—males 121, females 117; and Convulsions 1120—males 649, females 471.

per cent. of all deaths—males 3515, females 3890. The highest rate occurs in the Mainland-Rural Districts—183 to population as above—and lowest in the Insular-Rural Districts, where it is 135; in the Principal Town Districts it is 164, in the Large Town Districts 165, and in the Small Town Districts 177. As to the Principal Towns the highest rate falls in Edinburgh—195 per hundred thousand of its inhabitants—followed by Dundee with one of 190, Greenock 172, Perth 165, Paisley 163, Aberdeen 160, Glasgow and Kilmarnock each 158, Coatbridge 155, Leith 132, and Govan and Partick 104.

Diseases of the Respiratory Organs caused 13,562 deaths, equal to 312 in each hundred thousand of population, and 17·19 per cent. of all deaths—males 7244, females 6318. The rates in the Principal and Large Town

Districts are above that for Scotland, being in the former 385 and in the latter 314 to their respective populations, in the Small Town Districts it is 264, in the Mainland-Rural Districts 219, and in the Insular-Rural Districts 210. Among the Principal Towns Glasgow stands first with a mortality-rate to its population as before of 459, followed by Greenock with one of 392, Paisley 379, Dundee 372, Coatbridge 370, Govan and Partick 346, Leith 338, Aberdeen 307, Edinburgh 303, Kilmarnock 296, and Perth 283. Throughout Scotland Bronchitis caused 6140 deaths—males 2972, females 3168; Pneumonia caused 5712 deaths—males 3351, females 2361; and Croup caused 159 deaths—males 82, females 77.

To Diseases of the Digestive System 6158 deaths are registered, being 141 in every hundred thousand of population, and forming 7·80 per cent. of all deaths—males 3073, females 3085. The rate for Scotland is exceeded in each of the Urban Districts, that in the Principal Town Districts being 152, in the Large Town Districts 147, and in the Small Town Districts 145; in the Mainland-Rural Districts it is 122, and in the Insular-Rural Districts 83. Among the Principal Towns the highest rate occurs in Coatbridge —186 to population—followed by Kilmarnock with 183, Govan and Partick 164, Dundee with 161, Glasgow with 158, Leith with 153, Aberdeen with 146, Edinburgh with 143, Paisley with 138, and Greenock and Perth each with 109. To Enteritis 2179 deaths are registered in Scotland—males 1143, females 1036; to Peritonitis 715—males 342, females 373; to Hernia 144—males 61, females 83. Liver diseases caused 798 deaths—males 394, females 404. Ileus and Stricture of the Intestine and Intussusception together caused 412 deaths—males 205, females 207.

To Diseases of the Urinary Organs 2091 deaths are ascribed, being in the ratio of 48 in every hundred thousand of the inhabitants, and forming

2·65 per cent. of all deaths—males 1263, females 828. Acute Nephritis caused 391 deaths, Bright's Disease 1022, Calculus 26, Other Diseases of the Bladder and Prostate 393, and 259 are caused by various other pathological conditions of the same system not included in the above.

Diseases of the Organs of Reproduction or Generation caused 545 deaths, or 13 in every hundred thousand of population, and equal to 0·69 per cent. of all deaths—males 8, females 537. To Ovarian disease 67 deaths are ascribed, and to Uterine affections 104. Diseases incidental to Parturition, not including Puerperal Fever, to which latter 214 deaths are due, cause 341—together a total of 555.

From diseases of the Organs of Locomotion—bones and joints—there are 318 deaths registered, equal to 7 in every hundred thousand of population—males 177, females 141; and to diseases of the Skin 141 deaths are ascribed, in the persons of 64 males and 77 females.

Developmental diseases, not including Old Age, are accountable for 2673 deaths—males 1480, females 1193. Of those, Premature Birth is the ascribed cause for 2154, Atelectasis for 146, Cyanosis, Spina Bifida, and other congenital defects for 373.

To Old Age the death of 4337 persons are registered, a mortality-rate of 100 per hundred thousand of population, and 5·50 per cent. of all deaths—males 1616, females 2721. At ages between 95–100 years 43 men and 111 women died, while one of the former sex and eleven of the latter are reported as being 100 or over at death. The man who died *aet.* 100 was a pauper, formerly a pedlar. Four of the women were 100 years of age at death, in the persons of a pauper, and the widows of a crofter, a fisherman.

TABLE XXXVI.—Vaccinations in Scotland, 1889-1899, deducting from the Births those who died before they could be Vaccinated, and giving the Proportion of the Vaccinated to the surviving Births of each Year.

Years.		Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccination.			Removed from District before Vaccination, or otherwise unaccounted for.	TOTAL LIVING.

and a farmer respectively. Six of them were *aet.* 101 years, all widows, and one *aet.* 102, was a pauper, and formerly a domestic servant.

From Violence there are 3204 deaths, a rate of 74 per hundred thousand of population (male rate 109, female rate 40), forming 4·06 per cent. of all deaths—males 2304, females 900. Those due to Violence other than Accident are 256—males 182, females 74—and of those 11 are Homicidal and 245 Suicidal—the male suicides being 177 and the female 68. Accident or Negligence is the cause of 2948 deaths—males 2122, females

are fatal in 42 cases—all males. Accidental Drowning caused the death of 465 males and 82 females, and by Suicidal Drowning 36 males and 21 females ended their lives. From Burns and Scalds 235 deaths occurred—152 males, and 183 females. By Suffocation 375 deaths are accounted for—males 195, females 180—and of those 212 occurred in bed—104 males, and 108 females. Seventy-one males and 52 females were accidentally poisoned, and 8 males and 13 females ended their own lives by taking poison.

The poisons by which death was accidentally caused are—Opium, in some form, 19 males and 14 females; Chlorodyne, 1 female; Chloroform, 6 males and 7 females; Chloral Hydrate, 2 males; "An Anæsthetic," 1 male; Strychnia, 1 female; Aconite, 1 male and 3 females; Hemlock, 1 male; Oxalic Acid, 1 male and 1 female; Salts of Sorrel, 1 female; Cyanide of Potassium, 1 male; Alcohol, 7 males and 1 female; Lead, 4 males and 1 female; Carbonic Oxide, 9 males and 4 females; Ammonia, 2 males and 1 female; Phosphorus, 3 females; Arsenic, 2 males; Hydrochloric Acid, 2 males; Sulphuric Acid, 2 males; a "Corrosive Poison," 1 female; a "Caustic Alkali," 1 female; Carbolic Acid, 2 males and 6 females; a Ptomaine, 3 males and 3 females; Blood-poisoning from a sting, 1 female; Shell-fish, 1 male; "a Disinfectant," 1 female; "Irritant Poison," 2 males; others not indicated, 3 males and 1 female.

The poisons by which Suicide was effected are—Opium, 2 males and 7 females; Hydrocyanic Acid, 1 male; Strychnia, 1 female; Carbolic Acid, 4 males and 2 females; Oxalic Acid, 1 male and 1 female; Salts of Sorrel, 1 female; "a Liniment," 1 female.

Table XXXIX*a*. shows the methods by which Suicide was accomplished in Scotland and in its groups of Districts, its Counties, and Principal Towns. Thus, of 245 suicides 7 males effected their purpose on railways; 20 males shot themselves; 44 males and 8 females so cut or stabbed themselves that they died; 3 males and 6 females precipitated themselves from a height; 36 males and 21 females drowned themselves; 58 males and 19 females hung themselves; 8 males and 13 females had recourse to poison; and 1 male and 1 female took their own lives in a manner not particularly stated. In the different Districts the suicides are as follows:—In the Principal Town Districts 68 males and 30 females ended their own lives; in the Large Town Districts 22 males and 6 females did the same; in the Small Town Districts the numbers are, males 39 and females 14; in the Mainland-Rural Districts the males numbered 43 and the females 18; and in the Insular-Rural Districts 5 males so died, no females committing suicide in the same.

WEATHER AND ITS INFLUENCE ON THE MORTALITY.

The following remarks on the weather of the year are the Notes made by Dr. Buchan, under the direction of the Council of the Scottish Meteorological Society, which appear in the Registrar-General's Quarterly Reports:—

The weather of *January* was characterised by an unusually low barometric pressure, accompanied with an unusually large monthly range; a mean temperature half a degree under the average, with a mean daily range considerably above it; a high mean humidity; a large mean rainfall, having been only five times exceeded since 1856, and falling on three days more than the average; and winds, as regards direction, nearly the average, blowing with a less force than has been recorded since 1881.

The mean barometric pressure was 29·675 inches, or 0·105 inch less than the average. This diminution of pressure was greater in the south than in the north, but the same, latitude for latitude, in both the east and west. The results of this distribution of the pressure were a reduction or the usual gradient from south to north and a less wind force than usual, and a direction nearly normal.

The mean temperature was 36°·6, or 0°·5 under the average, the days being the average, but the nights a degree below it. Thus the greater cold was wholly caused by the greater cold of the nights. In the south, generally, temperature was above the average, the greatest excess, about a degree, being in the south-west from Islay to Wigtownshire; whereas to the north of the Forth and Clyde, temperature was under the average, the lowest temperatures, nearly two degrees under the average, being from the Pentland Firth to Strathtay. The coldest weather was from the 12th to the 18th and from the 23rd to the 27th. The absolutely highest temperature was 55°·0 on the 4th at Airds; and the lowest 7°·0 on the 5th at Aberlour.

The mean rainfall was 5·02 inches, or 29 per cent. above the average. The amounts were very irregularly distributed over the country, being above the average in Shetland, Orkney, and over the east side of Scotland for a great way inland, and, except at one or two isolated stations, everywhere to the south of the Grampians, both east and west. In Caithness and some parts of Aberdeenshire more than double the average fall was recorded. South of the Grampians the excess was nowhere large, exceeding a half more than the average only at a few stations. On the other hand, in the west from Loch Etive to Cape Wrath, the rainfall was less than the average, the deficiency ranging from 10 to 60 per cent.

The weather of *February* was characterised by a mean barometric pressure a little less than the average, with a monthly range greatly in excess of it; a mean temperature about the average, with a mean daily range much larger than usual; a mean humidity a good deal under the average; a mean rainfall rather under the average, falling two days fewer than usual; a wind force much under the average, the direction being two days of S.-E. wind and two days' calms in excess of the average.

The mean barometric pressure was 29·763 inches, or 0·090 inch less than the average. The diminution from the average was considerably greater in the south and west than in the north and east, and hence the greater prevalence of south-east winds, and, as pressure showed reduced gradients as compared with what generally prevails in this month, light winds and calms were more prevalent, the month being singularly free from storms.

The mean temperature was 38°·5, or all but the average. The days were 0°·8 above the average, but the nights 1°·0 under it, thus resulting in a very large mean daily range, with which the reduced humidity was in accordance. The distribution of the temperature was very peculiar. It was less than the average from the head of the Moray Firth through the Caledonian Canal to Fort-William and thence eastwards through inland stations in the counties of Forfar, Perth, and Dumbarton and the south shores of the Firth of Forth. The deficiency nowhere reached a degree, the lowest being 0°·8 at Perth. Everywhere else the temperature was above the average, the greatest excess being nearly a degree and a half in districts surrounding Peterhead, east of Orkney, Monach, Rothesay, Benquhat, and Ladylaw. Temperature was low during the first week, and towards the close of the month night temperatures were very low. The absolutely highest temperature was 59°·6 on the 21st at Fort Augustus, and the lowest 8°·3 on the 5th at Kingussie.

The mean rainfall was 2·69 inches, or 12 per cent. less than the average. It was above the average in the counties of Forfar, East Perth, and East Fife, and at isolated situations such as Monach, Airds, Cargen and Wolfelee, but the excess was small, except at Lednathie, where it was 73 per cent., and Airds 44 per cent. In all other parts of Scotland less than the average amounts fell. The greatest deficiencies were 81 per cent. at Glencarron and 69 per cent. at Lairg, but over widespread breadths it was less than a third of the average.

The weather of *March* was characterised by a rather high barometric pressure, with a monthly range a little above it; a mean temperature nearly a degree above the average, and the mean daily range also nearly a degree above it; a mean humidity rather under the average: a mean rainfall considerably above the average, falling on two days more than usual; a wind force slightly under the average, with a greater prevalence of winds from W.S.W., N.W., and N.

The mean barometric pressure was 29·946 inches, or 0·120 inch above the average. The excess was greater in the south and west than in the north and east, resulting in the greater prevalence of dry north-westerly winds.

The mean temperature was 40°·2, or 0°·8 in excess of the average, the days being 1°·3 and the nights 0°·4 above the average, the higher temperature being largely due to the greater warmth of the days. In Shetland, temperature was a degree below the average, and in Orkney about the average; but in all other districts it was above it, the greatest excess, from a degree and a half to two degrees, being in Perthshire and over a considerable breadth to south-westwards as far as Ayr and Kintyre. From the 11th to the 18th temperature was high for the season, rising on the 18th to 68°·0 at Ochtertyre, being absolutely the highest for the month, and during these eight days the mean was 6°·0 above the average of the month. On the other hand, temperature was very low, accompanied with snow and hail during the week ending the 25th, which was 7°·5 under the average in central Scotland. In this week the absolutely lowest, 3°·0, occurred on the 24th at Braemar.

The mean rainfall was 3·54 inches, or 26 per cent. above the average, and it was very irregularly distributed over the country. It was under the average in the neighbourhood of Skye, the north-east of Caithness and Aberdeenshire, on the east coasts from Montrose to the Tweed, and in Ayrshire and Wigtownshire; but in all other districts it exceeded the average. Except in a very few places the departures did not exceed 25 per cent. The largest excesses were 85 per cent. at Stornoway, Cromarty, and Dumfries, and a little over 50 per cent. at Dunrossness, Inverness, Fort-William, Craigrannoch, Airds, Glasgow, and Cargen.

The weather of *April* was characterised by an exceedingly low barometric pressure, with a monthly range a good deal under the average; a mean temperature a degree under the average, with a mean daily range a little under the average; an average mean humidity; a very heavy mean rainfall, falling on 8 days more than the average; being the largest number of rainy days hitherto recorded for April; and 3 days excess of northerly winds.

The mean barometric pressure was 29·735 inches, being 0·158 inch less than the average. This is the lowest mean barometric pressure hitherto recorded for April, except 29·591 inches, which occurred in 1867. The relatively larger diminution of pressure was much greater at eastern than

at western stations, resulting in a large excess of northerly winds and a lower temperature than usual for this month.

The mean temperature was 43°·0, or 1°·1 under the average. The deficiency was pretty equably distributed over the country, being only slightly larger at north-eastern than at south-western stations. Temperature was slightly higher during the first and fourth weeks than on the second and third weeks. The absolutely highest temperature was 66°·0 on the 24th at Smeaton, and the lowest 12°·7 on the 22nd at Kingussie.

The mean rainfall was 3·87 inches, or 81 per cent. above the average. This amount has been only exceeded by the rainfall of April 1867, when the mean amount was 4·43 inches. The rainfall was large in all parts of Scotland, falling to the average or below it at no single station. Over large districts considerably more than double the average rainfall was collected. The following are the percentages of excess at a number of places:—215 at Nairn, 195 at Cromarty, 176 at Cawdor, 150 at Monach and Gordon Castle, 160 at Lednathie and Campbeltown, 130 at Dunrobin, Inverness, and Poltalloch. The persistent rainy character of the weather of this month is shown by the circumstance that on each of the 30 days rain is reported from quite a large number of stations somewhere in Scotland, and the singular feature of the rainfall is that though the monthly amount at the stations is great, large single daily falls are conspicuously rare.

The weather of *May* was characterised by a rather high mean barometric pressure, with a monthly range a good deal above the average; an unusually low mean temperature, with an average mean daily range; a mean humidity slightly less than the average; a rainfall considerably above the average, falling on one day more than the average; a very large excess of east-northeasterly winds blowing with the average force of the season.

The mean barometric pressure was 30·020 inches, or 0·087 inch above the average. The excess above the average was considerably greater at western than at eastern stations, and from this geographical distribution of the pressure it followed that winds from E. were 3 days, and winds from N.E. 2 days in excess of the average direction, thus bringing about the very low temperatures which prevailed. The first three weeks of the month rank with the coldest May weather on record.

The mean temperature was 46°·3, or 2°·7 less than the average, the deficiency being very exactly distributed between the days and the nights. It resulted from the prevailing easterly winds that temperature was much lower in eastern than in western districts. As the easterly winds advance over the land, they acquire warmth as they proceed westwards, thus bringing about the remarkable result that while temperature in the east was more than three degrees under the average, in the west it was only half a degree. The absolutely highest temperature was 76°·0 on the 31st at Smeaton, and the lowest 21°·0 on the 27th at Lednathie.

The mean rainfall was 3·29 inches, or 45 per cent. above the average. This is one of the largest rainfalls since that of May 1856. Its distribution over the country was extremely irregular, being less than the average in the north-east of Scotland, north of Donside; and over western districts to the west of a line from Islay, thence passing Inveraray, Kingussie, Fort Augustus, Glencarron, and the Butt of Lewis. The deficiency was comparatively small, scarcely in any case amounting to half the average of the station. Everywhere else in Scotland the rainfall exceeded the average, in many places excessively so. The more prominent heavy monthly falls

were above the averages, stated in percentages of excess, 142 at Thurso and Mull of Galloway, 125 at Dundee, St. Abb's, Smeaton, Leith, and Glasgow, and about 100 at Pladda, Haddington, Perth, Arbroath, and Roeberry in Orkney. By far the larger proportion of the rain fell from the 13th to the 20th, and very large daily falls were common on the 15th, 16th, and 17th in the west, from Ardnamurchan northwards; and in other parts of the country very heavy falls occurred on the 18th, 19th, and 20th.

The weather of *June* was characterised by a very heavy mean barometric pressure, with a monthly range somewhat above the average; a very high mean temperature, with an unusually high mean daily range; a low mean humidity; a rather small rainfall, falling on two days fewer than the average; winds nearly the average direction, but blowing with greatly diminished force.

The mean barometric pressure was 30·051 inches, or 0·110 inch above the average; but the excess was distributed over Scotland with singular uniformity, so that the average direction of the wind for the month was maintained. It is noteworthy that no gales are anywhere reported during the month.

The mean temperature was 57°·4, or 2°·6 above the average; but while the nights were only 1°·4 in excess of the average, the days were 3°·7, thus pointing to the clearer skies and strong sunshine which frequently marked the weather of the month. As happens in such anti-cyclonic weather, the excess of temperature was much greater in inland districts than at places on or near the sea coast. Thus generally near the sea, the mean temperature did not exceed the average by more than a degree and a half, whereas in many strictly inland places the excess approached four degrees, and in a few places even exceeded this. The absolutely highest temperature was 85°·0 on the 12th at Ochtertyre; and the lowest, 33°·3 on the 1st at Braemar.

The mean rainfall was 1·80 inch, or 27 per cent. less than the average. Its distribution among the stations was quite peculiar. In Galloway, the Outer Hebrides, Orkney, and Shetland, the rainfall was above the average, but the excess scarcely anywhere exceeded 25 per cent. In all other parts of Scotland the rainfall was less than the average, but the deficiency scarcely exceeded half the average in any district. Nearly all the rain fell from the 1st to the 6th, and from the 17th to the end of the month. Fogs were frequent and widespread during the month, and to such a degree as seldom occurs.

The weather of *July* was characterised by a high barometric pressure, accompanied with a high monthly range; an unusually high mean temperature, with an unusually small mean daily range; a mean humidity a little above the average; a mean rainfall slightly above the average, falling on the average number of days; and wind nearly the average, both as regards direction and force.

The mean barometric pressure was 30·019 inches, being 0·144 inch in excess of the average. The excess was pretty uniformly distributed among the stations, except that it was rather greater in the south than in the north.

The mean temperature was 59°·1, or two degrees above the average, the excess of the days being 1°·4, and of the nights 2°·5, the nights being thus considerably warmer than the days. The excess was greatest to the south of a line drawn from Fraserburgh to Islay, amounting to from two an

a half to three degrees; on the other hand, in the west, from Cape Wrath to Wigtownshire, it was only a degree and a half, and in the neighbourhood of Skye it was less than a degree. The absolutely highest temperature was 84°·8 on the 31st at Dundee Harbour, and the lowest 37°·0 on the 5th at Braemar.

The mean rainfall was 3·46 inches, or 9 per cent. above the average. Its distribution over the country was extremely irregular, being above the average in Ross-shire, the counties immediately south of the Moray Firth, and the counties of Argyll, Bute, Renfrew, Dumbarton, Stirling, West and Mid Lothian, and Berwick. The greatest excesses were in percentages—86 at Duns Castle, 58 at Haddo House and Poltalloch, and fully 30 at a large number of stations. On the other hand, it was under the average in the Outer Hebrides, Galloway, East Lothian, Forfar, Kincardine, Inverness, and Caithness. Over large breadths the deficiency was a fourth to half the average.

The weather of *August* was characterised by an extraordinarily high mean barometric pressure, higher indeed than any previously recorded by the Society for this month, accompanied by one of the lowest monthly ranges yet observed; a mean temperature, the highest yet observed for August, with a mean daily range not exceeded by any previous August; a mean humidity decidedly under the average; a mean rainfall less than any previous August except 1880 and 1869, falling only on 8 days, smaller than any August except that of 1880 when the number of days was only 6; and a four days' excess of easterly winds, blowing with a force a good deal under the average.

The mean barometric pressure was 30·069 inches, or 0·218 inch in excess of the average. The excess was a little greater at southern and western stations than at northern and eastern stations, resulting in an excess of easterly winds which rapidly increased in temperature as they advanced from east to west over Scotland, owing to the drier, clearer air and strong sunshine accompanying them.

The mean temperature was 60°·1, or 3°·5 above the average, the days being 5°·2, and the nights only 1°·8 above the average. This is the highest mean temperature yet recorded in Scotland for this month, and it was occasioned by the strongly marked anti-cyclonic character of the weather which prevailed. Of the east coast stations on the coast from the Moray Firth to the Firth of Tay, the mean excess of temperature was less than one degree; at western, but more particularly inland situations, the excess was fully four degrees. The absolutely highest temperature was 88°·8 on the 1st at Dundee Harbour, and the lowest, 34°·5 on the 10th at Braemar.

The mean rainfall was 1·34 inch, or 64 per cent. under the average. At every station the rainfall was light, and over considerable breadths the amount did not exceed a fifth part of the average rainfall. Nearly the whole rainfall of the month occurred after the 25th, on which thunderstorms occurred at many places.

The weather of *September* was characterised by a low barometric pressure, with a monthly range a little less than the average; a mean temperature nearly a degree under the average; with a mean daily range much in excess of the average; a mean humidity a good deal under the average; a mean rainfall, considerably above the average, falling on 21 days. This large number of days has been only once exceeded in this month, viz., in 1872, when the days of rain were 22; and a seven days' excess of west-north-westerly winds, blowing with a force much above the average.

The mean barometric pressure was 29·713 inches, or 0·131 inch less than the average. Mean pressures were, to a much greater extent, under the average at eastern and northern than at western and southern stations. Thus they were respectively below their averages—0·200 inch at North Unst, 0·183 inch in Berwickshire, and 0·106 inch in Islay. Hence gradients were formed for the westerly and north-westerly winds which so greatly prevailed, and as the gradients were frequently steep, the winds were considerably above their average in force. Further, the Daily Weather Reports show that on 21 of the 30 days of the month cyclones were to the eastward of Scotland, resulting in these strong north-westerly winds.

The mean temperature was 51°·9, or 0°·9 under the average, the days being 0°·2, and the nights 1°·6 under the average. The amount of the diminution of temperature was, on the whole, uniformly spread over Scotland. The absolutely highest temperature was 79°·0 on the 6th at Cargen, and the lowest, 24°·0 on the 28th at Drumlanrig.

The mean rainfall was 4·59 inches, or 30 per cent. above the average. Its distribution was very unequal, being under the average in the counties of Kirkcudbright, Dumfries, Fife, and E. Berwick, but the deficiency was in all cases small. Over the whole of the rest of Scotland it was above the average, notably over the west from Mull to Orkney, being considerably more than double the average at individual stations in Orkney, Caithness, and the Outer Hebrides. To the south of the Grampians, except at one or two places, the excess did not amount to one-fourth the average of the place. The daily maps of rainfall show that September was very emphatically a wet month over Scotland, with the singular peculiarity that in comparatively few cases did the amount of the daily rainfall exceed one inch.

The weather of *October* was characterised by a rather high barometric pressure, with an unusually low monthly range for the season; a mean temperature very considerably above the average, with a mean daily range not hitherto exceeded in October: a humidity greatly under the average; and three days' excess of west-south-westerly winds, blowing with the average force.

The mean barometric pressure was 29·937 inches, or 0·131 inch above the average. The excess was much greater in the south than in the north,

TABLE XL.—Monthly Mortality and Mean Temperature in Scotland during 1899, compared with the Mean of the Ten Years 1881–1890.

	YEAR 1899.			1881–1890.	
MONTHS.	Mean Temperature.	Actual Deaths.	Proportion to 12,000 per Annum, or 1000 per Month.	Monthly Proportion of Deaths.	Mean Temperature.
	°				°

YEAR	46·9	79,548	12,000	12,000	45·8

being 0·180 inch on the Solway, whereas at North Unst pressure was slightly under the average. On the other hand, the monthly range was greatly in excess in the north as compared with the south. The type of weather for the month was strongly anticyclonic.

The mean temperature was 47°·8, or 1°·4 above the average, the mean of the days being 2°·6, and of the nights 0°·2 above the average. Thus the higher temperature was almost wholly due to the greater warmth of the days, owing to the dry, clear atmosphere and strong sunshine accompanying the anticyclones. The excess of temperature was evenly distributed over the different districts. The absolutely highest temperature was 76°·2 on the 19th at Lairg, and the lowest 20°·0 on the 15th at Stobo Castle.

The mean rainfall was 3·10 inches, or 23 per cent. under the average. It was under the average in the various districts, except at a comparatively small number of isolated stations in Shetland, Orkney, the Outer Hebrides, and in central districts, where it was above the average. The deficiency was greater in the east from the Tweed to the Dornoch Firth, amounting only to about a fourth of the average of the month at Peterhead, Logie Coldstone, Aberdeen, Lednathie, Montrose, and Arbroath. Among the stations the greatest excess was 22 per cent. at Fort William, and a like excess is reported from the top of Ben Nevis. The greater part of the rain fell from the 1st to the 4th, 10th to 13th, and 25th to 31st. Little or no rain fell from the 15th to the 23rd.

TABLE XLI.—Meteorology of Scotland for 1899, deduced from Observations made at 67 Stations of the Meteorological Society of Scotland, the particulars for each of the Stations having been published in the Quarterly Reports of the Registrar-General; also the Number of Births, Deaths, and Marriages registered during each Month of the Year 1899.

The weather of *November* was characterised by a high mean barometric pressure, with a correspondingly large monthly range; a mean temperature higher than any previously recorded for November, with a mean daily range slightly above the average; a mean humidity very much under the average; a mean rainfall greatly above the average, falling on two days more than the average; an extraordinary excess of west-south-westerly winds, blowing with a force only exceeded twice since 1856, *viz.*, in November 1881 and 1888, when it equalled respectively 3·71 and 4·77 lbs. to the square foot.

The mean barometric pressure was 29·908 inches, or 0·087 inch above the average. The distribution of pressure was very anomalous, being 0·171 inch above the average on the Solway, whereas in the north of Shetland it was 0·105 inch under the average; and pressure was also higher at eastern than at western stations in the same latitudes. Thus steep barometric gradients were formed for west-south-westerly winds of unusual strength.

The mean temperature was 46°·4, or 5°·8 above the average. As regards Edinburgh, where temperature has been observed since 1763, this is absolutely the highest November mean temperature that has occurred. The mean of the days was 5°·9, and of the nights 5°·6 above the average, being thus equably distributed between the days and the nights. The excess was least in the north, and greatest in strictly inland situations, being 3°·0 at North Unst and 6°·6 at Ochtertyre, near Crieff. The absolutely highest temperature was 63°·3 on the 4th at Fort William, and the lowest 21°·0 on the 18th at Stobo Castle.

The mean rainfall was 4·85 inches, or 27 per cent. above the average. At places in the extreme south-west from Islay to Wigtownshire, and over a somewhat broad strip from the east coast inland and stretching from the Tweed to the Pentland Firth, the rainfall was markedly under the average. Over all the rest of Scotland, particularly inland situations, it was markedly

---

TABLE XLII.—Showing the connection between certain Atmospheric Phenomena, especially Temperature, and the Deaths from certain Diseases and Classes of Diseases, in Eight of the Principal Towns of Scotland, during each Month of the Year 1899.

ve the average. In this case the position of Ireland to west sheltered south-west of Scotland from the violence of the west-south-westerly ns; the eastern stations being similarly sheltered by the mountainous ions to the west. The rain fell mostly during the first fortnight, very vy falls occurring on the 3rd. In the west much rain fell during the week of the month, but at eastern stations the fall during the last fortht was small.

The weather of *December* was characterised by a mean barometric pressure y a little above the average, with an unusually large monthly range; a an temperature greatly under the average, the mean daily range being but the average; a rather low mean humidity; a mean rainfall slightly ve the average, falling on very nearly the usual number of days for cember; and a very large excess of south-easterly winds, blowing with average for the month.

The mean barometric pressure was 29·811 inches, or 0·020 inch in excess he average. In the west from Cape Wrath to the Solway pressures re under the average, the greatest deficiency, 0·037 inch, being in the nty of Wigtown; whereas over the whole of the east from north to south ssures were above the average, the greatest excess being 0·150 inch in tland. Gradients were thus formed for the seven days' excess of winds n east, south-east, and south which prevailed.

The mean temperature was 35°·6, or 2°·2 less than the average, the iciency being equably distributed between the days and the nights. The atest deficiency was at places south of the Caledonian Canal, more ticularly at places in inland and eastern situations, where in several es it amounted to 5°·0; and least at coast stations in the west from rnoway to the Mull of Kintyre, where it was less than one degree. The olutely highest temperature was 56°·2 on the 1st at Loanhead; and the est, 0°·9 on the 14th at Glenlee.

XLIII.—Deaths, Temperature, and Fall of Rain in Eight of the Principal Towns of Scotland during ch Week of the Year 1899; also the Proportion of Deaths to every Thousand of the Population.

The mean rainfall was 4·16 inches, exceeding the average by only two-tenths of an inch. Its distribution over the country was remarkably striking, being above the average over the whole of the east for a considerable way inland, and at coast stations in the west from the Butt of Lewis so the Mull of Galloway. The greatest excess was on the shores of the Moray Firth from Cromarty to Gordon Castle, where it amounted to double the average fall, and in the county of Wigtown and the extreme south of Argyll, where the excess was 80 per cent. The rain fell principally during the first eight and last twelve days of the month. Thunder and lightning were entirely absent.

Tables XL. and XLI. present in a condensed form some facts respecting the meteorological conditions of each month and the monthly mortality in Scotland during 1899. In the former Table we have the actual number of deaths and the mean temperature for each month, and in the last two columns there is given for the sake of comparison similar details founded upon observations of the ten years 1881-1890, and on comparing these we find the lowest mean temperature during the year under review occurred during January, February, and December, the first and last of them being under those for the decennial period. The highest temperature of the year occurred during July and August, in both of which it is considerably above the mean for the same as shown during the ten years. The mean temperature for the year is above that for the longer period by 1°·1.

From Table XLI. it may be observed that throughout Scotland the death-rate was at its maximum during the coldest and most inclement months of the year, inasmuch as 10·15 per cent. of the deaths were registered during February, 9·51 per cent. during March, 9·09 per cent. during January, and 8·64 per cent. during December, the rate in the other months being 8·51 per cent. during May, 8·38 per cent. during August, 8·21 per cent. during April, 8·64 per cent. during September, 7·74 per cent. during June, 7·34 per cent. during October, 7·28 per cent. during November, and 7·11 per cent. during July.

TABLE XLIV.—Monthly Deaths at Four Periods of Life in Eight of the Principal Towns of Scotland during the Year 1899, and Proportion at each Age in every Hundred Deaths per Month.

MONTHS.	Actual Number of Deaths in 1899.					Proportion at each Age in every Hundred Deaths per Month.				
	0–5 years.	5–20.	20–60.	60 and above.	Total Deaths.	0–5 years.	5–20.	20–60.	60 and above.	Total.

Table XLII. is made up from information obtained regarding eight of the Principal Towns of Scotland, and indicates the connection between certain atmospheric phenomena and the mortality from certain diseases and classes of disease. Miasmatic diseases generally were most fatal during the early months of the year, but were again decidedly increasing as causes of death during November and December. Among the Miasmatics noted there is a single death from Small-pox in these towns, and which occurred in Glasgow and is registered during the month of June. Measles as a cause of death is most in evidence during March, November, and December, least so during August, September, and October. The largest number of deaths from Scarlet Fever (48) are registered during January, the fewest (20) during March and April. Hooping Cough was by far most fatal during the first three months of the year, but was again increasing during November and December; the minimum of deaths from this disease occurred during September and October. Diphtheria was the registered cause of 39 deaths in those towns during January and of 30 during November, the smallest number being 12 during July and the same during August, the mortality on the whole being greatest at each end of the year, least during the months of summer. Deaths from Fevers (chiefly Enteric or Typhoid) were most marked during the autumnal months, 49 occurring during September and 51 during October. April, May, and June are the months in which the fewest deaths from Fevers were registered.

Diarrhœal mortality always closely attends upon a high rise of the thermometer and we accordingly find the largest number of such deaths 113 being registered in July, 321 in August, and 361 in September, months in which the temperature was at its maximum and following upon a warm June. They were at their minimum during the colder months generally.

Phthisis or Consumption is as a rule a chronic disease and perhaps not so specially affected by climatic conditions as to hasten the end, and it will be seen how during each month many deaths are registered from it, but on the whole perhaps the earlier months show a greater mortality than the others from this fell disease.

TABLE XLV.—Months equalised to 31 Days, and Deaths at each Age corrected thereto, in order to show the relative Mortality at each Age in Eight of the Principal Towns during each Month of the Year 1899.

MONTHS.	Relative Number of Deaths in 1899.					Monthly Deaths proportioned to 1000 per Month or 12,000 per annum.
	0–5 years.	5–20.	20–60.	60 and above.	Total.	
January	1031	181	1099	723	3034	1099
February	1255	214	1239	1031	3739	1354
March	1082	189	1031	709	3011	1091
April	938	194	870	643	2645	958
May	942	208	851	587	2588	937
June	847	215	845	549	2456	890
July	807	191	775	488	2261	819
August	1250	183	786	546	2765	1002
September	1200	187	821	510	2718	985
October	867	184	814	552	2417	875
November	1045	177	806	536	2564	929
December	1097	216	907	708	2928	1061
YEAR	12,361	2,339	10,844	7,582	33,126	12,000

The more acute diseases of the Respiratory Organs are particularly influenced by weather conditions, and are as seen much more fatal during the months of winter and spring than during those of summer and autumn; the largest number of deaths from Pneumonia and Bronchitis are during January, February, March, April, November, and December. Very much the same may be seen from the Table to hold in the case of diseases of the Heart and Brain.

Tables XLIV. and XLV. are intended to indicate the comparative mortality at four periods of life during the successive months of 1899 in eight of the Principal Towns of Scotland.

The deaths of children (0-5 years) are registered in greatest numbers during the early and later months of the year, when Zymotics were prevalent and Pulmonary affections fatal.

Among adolescents (5-20 years) the same holds, with, in addition, a considerable mortality during the months of May and June, when Phthisis was the cause of many deaths.

Adults (20-60 years) suffered decidedly most severely during the months of January, February, March, and December—those months when deaths from Pulmonary diseases generally were numerous.

Among the aged (60 and above) the mortality was at its maximum during the colder and most inclement months at either end of the year, when, as may be readily supposed, feeble and damaged organs generally, as Heart, Lungs, and Brain, easily break down.

I have the honour to be,

SIR,

Your most obedient Servant,

R. J. BLAIR CUNYNGHAME, M.D.

GENERAL REGISTRY OFFICE OF BIRTHS, &c.,
EDINBURGH, *6th September* 1901.

APPENDIX TABLES.

VACCINATIONS IN SCOTLAND—1899.

No. of Division, &c.	REGISTRATION GROUPS, DIVISIONS, AND COUNTIES.	Successfully Vaccinated.	Vaccination Postponed.	Insusceptible of Vaccine Disease			Died before Vaccination.	Removed from District before Vaccination, or otherwise unaccounted for.
				On the ground of Constitutional Insusceptibility.	In respect of the Children having already had Small-pox.	On the ground of previous Successful Vaccination.

N.B.—Districts containing Parliamentary and Royal Burghs are printed in capitals, thus:—EDINBURGH. Districts containing Towns of 2000 Inhabitants and upwards are printed in small capitals, thus:—Carluke.

An asterisk "*" is prefixed to those Districts which have different names from the Parishes in which they are situated, or which comprise more, or parts of more, than one Parish. The component parts of these Districts will be found at page 474.

A dagger "†" is prefixed to those Districts which consist of only a part of the Civil Parish of the same name.

CONSTITUTION OF THE DISTRICTS DISTINGUISHED IN THE PRECEDING TABLES BY AN ASTERISK (*).

No.	Districts.	Component Parts (Parishes).
13	Birsay	Part of Harray and Birsay.
14	Deerness	Part of St Andrews.
18	Harray	Part of Harray and Birsay.
22	North Ronaldshay	Part of Cross and Burness.
26	Sanday	Lady, and part of Cross and Burness.
37b	Keiss	Parts of Canisbay and Wick.
58	Applecross	(1) Part of Applecross; (2) Remainder of Applecross and part of Gairloch.
59b	Carnoch	Parts of Contin and Urray.
86b	Carloway	Parts of Barvas and Uig.
87	Lochs	Lochs, and part of Uig.
92b	Cannich	Parts of Kilmorack and Kiltarlity and Convinth.
112	Kilmuir	(1) Part of Kilmuir; (2) Remainder of Kilmuir, and part of Snizort.
135	Elgin	Elgin, and parts of New Spynie, and St Andrews-Lhanbryde.
152	Enzie	Parts of Bellie and Rathven.
155b	Glenrinnes	Parts of Aberlour and Mortlach.
167	Seafield	Parts of Cullen and Rathven.
171b	Ardallie	Parts of Cruden, Ellon, Longside, and Old Deer.
210b	Kinninmonth	Parts of Crimond, Longside, Lonmay, Old Deer, and Strichen.
217	Logie Coldstone and Cromar	Logie Coldstone, and part of Glenmuick, Tullich, and Glengairn.
222b	Millbrex	Parts of Fyvie and Monquhitter.
227b	New Pitsligo	Parts of Aberdour, New Deer, Strichen, and Tyrie.
231	Peterculter	(1) Parts of City Parish of Aberdeen and Peterculter; (2) Remainder of Peterculter.
237b	Savoch	Parts of Ellon, New Deer, Old Deer, and Tarves.
249b	Ythan Wells	Parts of Auchterless and Forgue.
266	Nigg	Nigg, and part of City Parish of Aberdeen.
282	Dundee	Dundee, and part of Liff, Benvie, and Invergowrie.
294b	Kilry	Parts of Glenisla and Lintrathen.
324	Aberfeldy	Parts of Dull, Kenmore, and Logierait.
330	Auchtergaven	Parts of Auchtergaven and Logiealmond.
331	Balquhidder	Balquhidder, and part of Comrie.
344	Dowally	Part of Dunkeld and Dowally.
349	Dunkeld	Part of Dunkeld and Dowally.
355b	Foss	Parts of Blair-Athol and Dull.
361	Killin	Parts of Kenmore and Killin.
375	Logiealmond	Parts of Logiealmond, Little Dunkeld, and Methven.
379	Meigle	Meigle, and part of Coupar-Angus.
386b	Persie	Parts of Alyth, Blairgowrie, and Kirkmichael.
387	Perth	Perth, and part of Kinnoull.
393b	Stanley	Parts of Auchtergaven, Kinclaven, and Redgorton.
394b	Strathfillan	Part of Killin.
394c	Tenandry	Parts of Blair-Athol and Moulin.
402	Anstruther-Easter	Anstruther-Easter, and part of Kilrenny.
417	Crail	Part of Crail and May Island.
423	Dunbog	Dunbog, and part of Flisk.
425	Dunino	Dunino, and part of Crail.
442	Kirkcaldy and Abbotshall	Kirkcaldy, Abbotshall, and part of Kinghorn.
481b	Grangemouth	Parts of Bothkennar, Falkirk, and Polmont.
488	St Ninians	Parts of St. Ninians and Stirling.
490	Stirling	Parts of St. Ninians and Stirling.
496	Dumbarton	Dumbarton, and part of Cardross.
504	Ardchattan	Part of Ardchattan and Muckairn.
505	Ardnamurchan	(1) Part of Ardnamurchan and of Arisaig and Moidart; (2) Remainder of Arisaig and Moidart.
506	Ballachulish, etc.	Parts of Kilmallie and Ardgour.
509	Cumlodden and Minard	Parts of Glassary and Glenaray.
513	Inveraray	Inveraray, and part of Glenaray.
515	Kilbrandon and Kilchattan	Kilbrandon and Kilchattan, and part of Jura.
517	Kilchrenan, etc.	(1) Parts of Kilchrenan and Dalavich, and Glenorchy and Inishail; (2) Remainder of Kilchrenan and Dalavich.
520	Kilmallie	Parts of Kilmallie and Ardgour.
525	Lismore	Lismore and Appin, and part of Ardgour.
526	Lochgilphead	Parts of Glassary and South Knapdale.
529	Muckairn	Parts of Ardchattan and Muckairn, and Glenorchy and Inishail.
535	Tarbert	Parts of Kilcalmonell, Saddell and Skipness, and South Knapdale.
536	Bowmore (or Kilarrow)	Part of Kilarrow and Kilmeny.
543	Kilmeny	Part of Kilarrow and Kilmeny.
545	Kinlochspelvie	Part of Pennygown and Torosay.
547	Portnahaven	Part of Kilchoman.
548	Salen	Parts of Kilninian and Kilmore, and Pennygown and Torosay.
549	Tobermory	Part of Kilninian and Kilmore.
550	Torosay	Part of Pennygown and Torosay.
556	Lochranza	Parts of Kilbride and Kilmory.
559b	Bridge-of-Weir	Parts of Houston and Killellan, and Kilbarchan.
572	Neilston	(1) Part of Neilston; (2) Remainder of Neilston, and part of Paisley.
576	Ardrossan	(1) Parts of Ardrossan and West Kilbride; (2) Remainder of Ardrossan.
584b	Crosshill	Parts of Kirkmichael, Kirkoswald, and Maybole.
595	Irvine	Irvine, and part of Dundonald.
610b	Patna	Parts of Dalmellington, Dalrymple, Kirkmichael, and Straiton.
622	Barony	Part of Glasgow.
626b	Calderhead	Parts of Cambusnethan and Shotts.
644	Glasgow	Gorbals, and parts of Glasgow and Govan.

CONSTITUTION OF THE DISTRICTS—*continued.*

No.	Districts.	Component Parts (Parishes).
685	Edinburgh . . .	City Parish of Edinburgh, and parts of Duddingston and Liberton.

* The actual number of Districts is 1073—many Parishes and Burghs having been divided into two or more Distr for the purpose of Registration. Thus Edinburgh and Glasgow, to each of which only a single number is assigned in Tables, consist of 6 and 14 Districts respectively. In forming the alphabetical arrangement the principle adopted has b to place *compound* names in the order in which they are pronounced.
